Section 1

INTRODUCTION

Construction Electrician

Foreword

This Construction Electrician Program Outline is intended as a guide for instructors, apprentices, and employers of apprentices as well as for the use of industry organizations, regulatory bodies, and provincial and federal governments. It reflects updated standards based on the Construction Electrician Red Seal Occupational Standard (RSOS) (2015), Industrial Electrician Red Seal Occupational Standard (RSOS) (2016) and British Columbia industry and instructor subject matter experts.

Practical instruction by demonstration and student participation should be integrated with classroom sessions. Safe working practices, even though not always specified in each operation or topic, are an implied part of the program and should be stressed throughout the apprenticeship.

This Program Outline includes a list of recommended reference textbooks that are available to support the learning objectives and the minimum shop requirements needed to support instruction.

Competencies are to be evaluated through the use of written examinations and practical assessments. The types of questions used on written examinations must reflect the cognitive level indicated by the learning objectives and the learning tasks listed in the related competencies. See the Assessment Guidelines in the Appendix for more details.

Important Program Information:

Industry strongly recommends that apprentices considering attending the Level 1 Construction Electrician program have at least one year of work-based training as an electrical apprentice before beginning their in-school technical training.

Apprentices who attain workplace competencies before attending technical training are in a better position to take advantage of the in-school portions of their apprenticeship.

CANADIAN ELECTRICAL CODE AND THE PROGRAM OUTLINE

The Canadian Electrical Code (CEC) requirements are expected to be applied to all relevant competencies and learning tasks even when a code reference is not given.

SAFETY ADVISORY

Be advised that references to the WorkSafe BC safety regulations contained within these materials do not/may not reflect the most recent Occupational Health and Safety Regulation (the current Standards and Regulation in BC can be obtained on the following website: <http://www.worksafebc.com>). Please note that it is always the responsibility of any person using these materials to inform him/herself about the Occupational Health and Safety Regulation pertaining to his/her work.

- Monty Wood enCompass Solutions

Subject Matter Experts retained to assist in the development of 2020 revisions to the Program Outline for Construction Electrician and Industrial Electrician:

- Nathan Chapin British Columbia Institute of Technology
- Peter Poeschek Thompson Rivers University
- Stephen Van Rhijn Canfor
- Jeremiah Williamson Okanagan College

SkilledTradesBC would like to acknowledge the dedication and hard work of all the industry representatives appointed to identify the training requirements of the Construction Electrician and Industrial Electrician occupations.

How to Use this Document

This Program Outline has been developed for the use of individuals from several different audiences. The table below describes how each section can be used by each intended audience.

Section	Training Providers	Employers/ Sponsors	Apprentices	Challengers
Program Credentialing Model	Communicate program length and structure, and all pathways to completion	Understand the length and structure of the program	Understand the length and structure of the program, and pathway to completion	Understand challenger pathway to Certificate of Qualification
OAC	Communicate the competencies that industry has defined as representing the scope of the occupation	Understand the competencies that an apprentice is expected to demonstrate in order to achieve certification	View the competencies they will achieve as a result of program completion	Understand the competencies they must demonstrate in order to challenge the program
Training Topics and Suggested Time Allocation	For each level of technical training, this defines the suggested proportion of time spent on each GAC, and the percentage of that time spent on theory versus practical learning. Checkmarks indicate where marks will be allocated. Note that there may be practical time suggested even if there is no defined achievement criteria in a competency.	For each level of technical training, this defines the suggested proportion of time spent on each GAC, and the percentage of that time spent on theory versus practical learning. Checkmarks indicate where marks will be allocated. Note that there may be practical time suggested even if there is no defined achievement criteria in a competency.	For each level of technical training, this defines the suggested proportion of time spent on each GAC, and the percentage of that time spent on theory versus practical learning. Checkmarks indicate where marks will be allocated. Note that there may be practical time suggested even if there is no defined achievement criteria in a competency.	For each level of technical training, this defines the suggested proportion of time spent on each GAC, and the percentage of that time spent on theory versus practical learning. Checkmarks indicate where marks will be allocated. Note that there may be practical time suggested even if there is no defined achievement criteria in a competency.
Program Content	Defines the objectives, learning tasks and high level content that must be covered for each competency	Identifies detailed program content; may be used as a checklist prior to signing a recommendation for certification (RFC) for an apprentice	Provides detailed information on program content and performance expectations for demonstrating competency	Allows individual to check program content areas against their own knowledge and performance expectations against their own skill levels
Achievement Criteria	Defines observable, measurable performance expectations for competencies with a lab component. For this trade, achievement criteria is performed in a lab setting and does not indicate workplace standards	Defines observable, measurable performance expectations for competencies with a lab component. For this trade, achievement criteria is performed in a lab setting and does not indicate workplace standards	Defines observable, measurable performance expectations for competencies with a lab component. For this trade, achievement criteria is performed in a lab setting and does not indicate workplace standards	Defines observable, measurable performance expectations for competencies with a lab component. For this trade, achievement criteria is performed in a lab setting and does not indicate workplace standards

Section	Training Providers	Employers/ Sponsors	Apprentices	Challengers
Training Provider Standards	Defines the facility requirements, tools and equipment, reference materials (if any) and instructor requirements for the program	Identifies the tools and equipment an apprentice is expected to have access to; which are supplied by the training provider and which the student is expected to own	Provides information on the training facility, tools and equipment provided by the school and the student, reference materials they may be expected to acquire, and minimum qualification levels of program instructors	Identifies the tools and equipment a tradesperson is expected to be competent in using or operating; which may be used or provided in a practical assessment
Appendix – Glossary of Acronyms	Defines program specific acronyms	Defines program specific acronyms	Defines program specific acronyms	Defines program specific acronyms
Assessment Guidelines	<p>Defines the weighting of theory and practical (lab) marks by GAC to be used to calculate an apprentice's in-school mark for each level. The practical weighting is a reflection of performance on the achievement criteria for each level.</p> <p>Assessment Guidelines also define the weighting of the in-school mark to the standard level exam mark (where applicable) in order to calculate an apprentice's final mark for each level.</p>	<p>Defines the weighting of theory and practical (lab) marks by GAC to be used to calculate an apprentice's in-school mark for each level. The practical weighting is a reflection of performance on the achievement criteria for each level.</p> <p>Assessment Guidelines also define the weighting of the in-school mark to the standard level exam mark (where applicable) in order to calculate an apprentice's final mark for each level.</p>	<p>Defines the weighting of theory and practical (lab) marks by GAC to be used to calculate an apprentice's in-school mark for each level. The practical weighting is a reflection of performance on the achievement criteria for each level.</p> <p>Assessment Guidelines also define the weighting of the in-school mark to the standard level exam mark (where applicable) in order to calculate an apprentice's final mark for each level.</p>	Understand the relative weightings of various competencies of the occupation on which assessment is based

Section 2

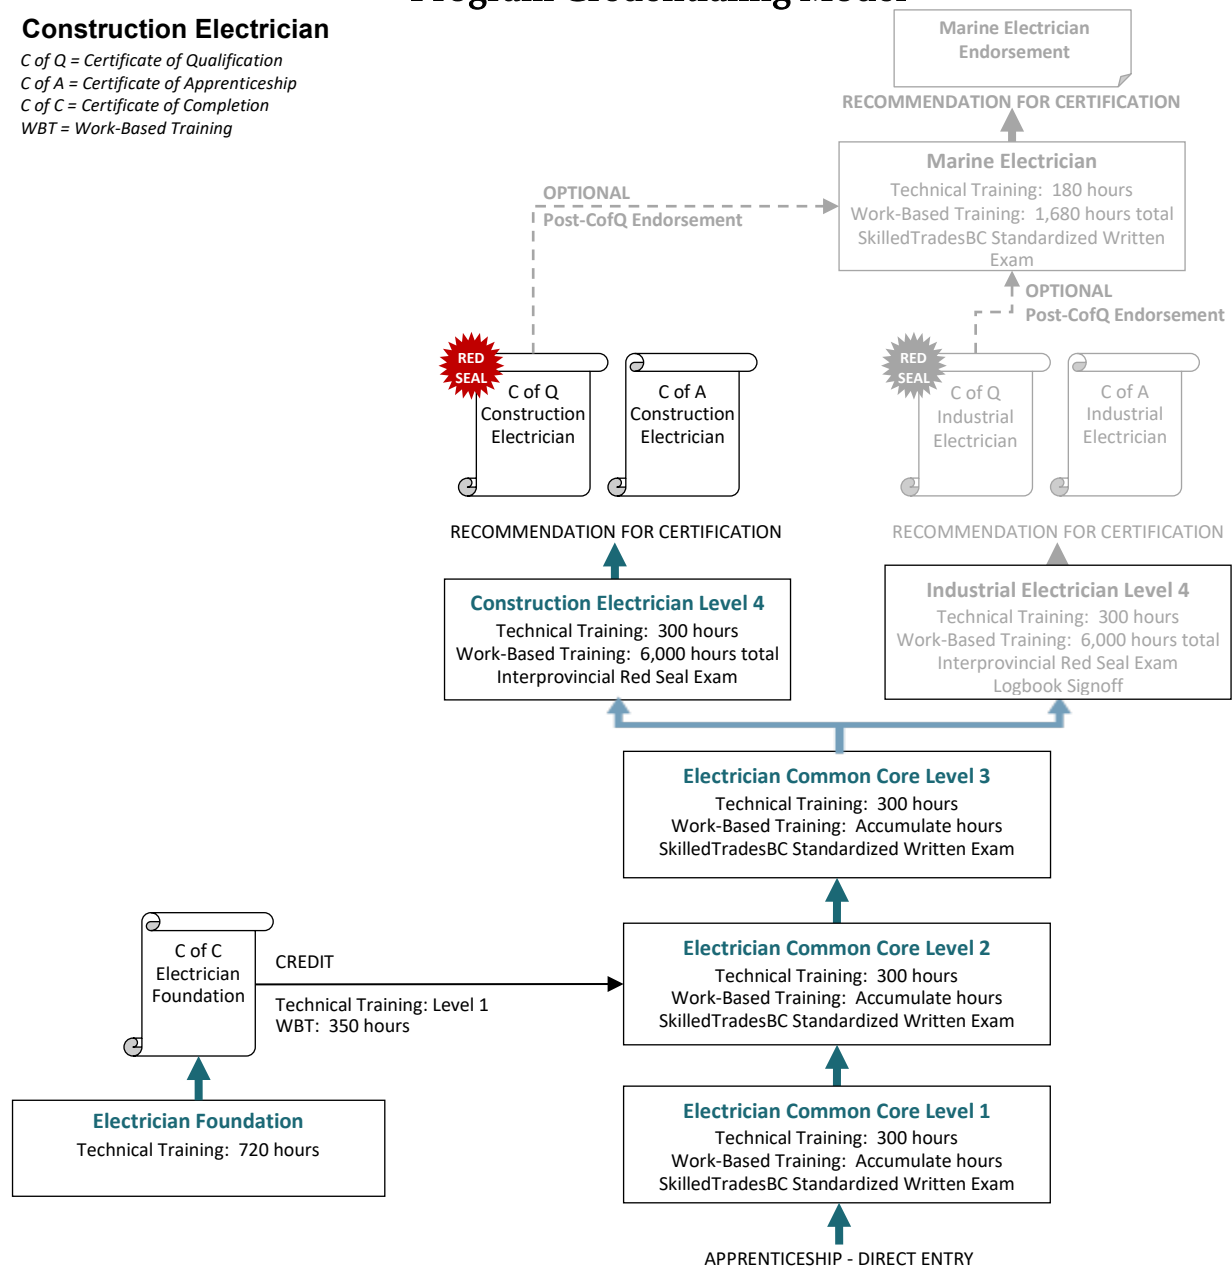

PROGRAM OVERVIEW

Construction Electrician

Program Credentialing Model

Construction Electrician

C of Q = Certificate of Qualification
C of A = Certificate of Apprenticeship
C of C = Certificate of Completion
WBT = Work-Based Training

CROSS-PROGRAM CREDITS

Individuals who hold the credentials listed below are entitled to receive partial credit toward the completion requirements of this program

Occupational Analysis Chart

CONSTRUCTION ELECTRICIAN AND INDUSTRIAL ELECTRICIAN

Occupation Description: Construction Electricians plan, design, assemble, install, alter, repair, inspect, verify, commission, connect, operate, maintain and decommission electrical systems. Electrical systems provide heating, lighting, power, alarm, security, communication and control in residential, commercial, institutional, industrial, transportation, marine and entertainment environments.

Occupation Description: Industrial Electricians inspect, install, test, troubleshoot, repair, and service industrial electrical equipment and associated electrical and electronic controls. Service includes calibration and preventative/predictive maintenance. Industrial electricians are employed by maintenance departments of plants, mines, smelters, oil and gas operations, mills, shipyards, utility companies, manufacturing facilities and other industrial establishments. Some are employed by electrical contractors.

APPLY CIRCUIT CONCEPTS A	Use electrical circuit concepts A1 1 2	Analyze DC circuits A2 1	Analyze principles of electromagnetism A3 1	Analyze single-phase AC circuits A4 2
	Analyze three-phase AC circuits A5 3	Analyze electronic circuits A6 1 2 3 4C		
PERFORM SAFETY-RELATED FUNCTIONS B	Use personal protection equipment (PPE) and safety equipment B1 1	Maintain safe work environment B2 1	Perform lock-out and tag-out procedures B3 1	
USE TOOLS AND EQUIPMENT C	Use common and specialty tools and equipment W C1 	Use access equipment W C2 	Use rigging, hoisting and lifting equipment W C3 	Use measuring and testing equipment C4 1 3

W = Competencies for which knowledge or skills are primarily acquired in the workplace

4C = Competency included in Construction Electrician Level 4 Program Outline content

4IE = Competency included in Industrial Electrician Level 4 Program Outline content

ORGANIZE WORK D	Interpret plans, drawings and specifications D1 1 2 3 4C 4IE	Use Canadian Electrical Code (CEC) D2 1	Organize materials and supplies W D3 4C 4IE	Plan project tasks and procedures W D4
	Prepare worksite W D5	Finalize required documentation W D6	Identify hazardous locations D7	
FABRICATE AND INSTALL SUPPORT COMPONENTS E	Fabricate support structures W E1	Install brackets, hangers and fasteners W E2	Install seismic restraint systems W E3	
COMMISSION AND DECOMMISSION ELECTRICAL SYSTEMS F	Commission systems W F1	Perform startup and shutdown procedures W F2	Decommission systems W F3	
USE COMMUNICATION AND MENTORING TECHNIQUES G	Use communication techniques W G1	Use mentoring techniques G2 1		
INSTALL AND MAINTAIN CONSUMER/SUPPLY SERVICES AND METERING EQUIPMENT H	Install single-phase consumer/supply services and metering equipment H1 1 2	Install three-phase consumer/supply services and metering equipment H2 3	Maintain single-phase services and metering equipment H3 1	Maintain three-phase services and metering equipment H4 3
INSTALL AND MAINTAIN PROTECTION DEVICES I	Install overcurrent protection devices I1 2	Install ground fault, arc fault and surge protection devices I2 1 2	Install under and over voltage protection devices I3 4IE	Maintain protection devices W I4
INSTALL AND MAINTAIN LOW VOLTAGE DISTRIBUTION SYSTEMS J	Install low voltage distribution equipment J1 1 3	Maintain low voltage distribution equipment W J2		

W = Competencies for which knowledge or skills are primarily acquired in the workplace
4C = Competency included in Construction Electrician Level 4 Program Outline content
4IE = Competency included in Industrial Electrician Level 4 Program Outline content

INSTALL AND MAINTAIN POWER CONDITIONING, UNINTERRUPTIBLE POWER SUPPLY (UPS) AND SURGE SUPPRESSION SYSTEMS K	Install power conditioning, UPS and surge suppression systems <div style="text-align: right;">K1</div>	Maintain power conditioning, UPS and surge suppression systems <div style="text-align: right;">K2</div>

PROGRAM CONTENT

Construction Electrician

Level 1

Electrician Common Core

Line (GAC): A **APPLY CIRCUIT CONCEPTS**

Competency: **A1 Use electrical circuit concepts**

Objectives

To be competent in this area, the individual must be able to:

- Apply electrical circuit concepts.
- Perform electrical circuit calculations.
- Perform meter readings to verify circuit concepts.
- Describe the principles of alternating current.

LEARNING TASKS

1. Describe the structure of matter
2. Describe the concepts of electric charge and current flow
3. Describe methods of producing electricity
4. Describe electrical quantities, units and symbols and metric prefixes
5. Describe the relationship between electrical power and energy
6. Identify common drawings for electric circuits

CONTENT

- States of matter
- Elements and compounds
- Molecules and atoms
- Conductors, insulators and semiconductors
- Laws of charges and electrostatic fields
- Applications of static charges
- Hazards of static charges
- Electron flow and polarity
- Direct current and alternating current
- Triboelectric effect
- Electrochemical effect
- Piezoelectric effect
- Thermoelectric effect
- Photovoltaic effect
- Magneto electric effect
- Metric prefixes
- Coulomb
- Ampere
- Volt
- Ohm
- Watt
- Joule
- Power and energy calculations
- Percent efficiency
- Reasons for different voltage levels
- Pictorial diagram
- Block diagram
- One-line diagram
- Wiring diagram

LEARNING TASKS	CONTENT
7. Describe the basic operation of electric circuits	<ul style="list-style-type: none"> • Schematic diagram • Circuit terminology • Circuit components • Polarity and current flow
8. Perform calculations by applying electric circuit laws	<ul style="list-style-type: none"> • Ohm's Law • Watt's Law • Factors affecting resistance • Power dissipation in resistance devices • Voltage drop and power loss in conductors • Efficiency calculations
9. Perform meter readings to verify circuit concepts	<ul style="list-style-type: none"> • Safety precautions • Voltmeter use • Ammeter use • Ohmmeter use • Multimeter use • Reading scales
10. Describe features of resistors	<ul style="list-style-type: none"> • Common types and ratings • Resistor colour codes • Potentiometers and rheostats
11. Describe features of switches	<ul style="list-style-type: none"> • CEC • Terminology • Switch classifications • Circuit applications
12. Describe features of circuit protection devices	<ul style="list-style-type: none"> • CEC • Terminology • Fuses • Circuit breakers
13. Describe the characteristics of common conducting materials and conductor forms	<ul style="list-style-type: none"> • CEC • Properties of conducting materials • Solid conductors • Stranded conductors
14. Describe common insulating materials used for conductors	<ul style="list-style-type: none"> • CEC • Properties of common insulations • Insulation ratings • Applications and conditions of use
15. Describe the application of various types of conductors	<ul style="list-style-type: none"> • CEC • Categories of use • Single conductors • Cables

LEARNING TASKS
CONTENT

- | | |
|--|--|
| | <ul style="list-style-type: none"> • Flexible wires and cords • Bus bars • Grounding and bonding |
| 16. Measure and describe sizing of conductors | <ul style="list-style-type: none"> • CEC • Circular and square mils • American wire gauge sizes • Metric wire sizes |
| 17. Calculate the resistance of conductors | <ul style="list-style-type: none"> • CEC • Factors affecting resistance • Temperature effects |
| 18. Determine the ampacity of various types of conductors | <ul style="list-style-type: none"> • CEC • Factors affecting ampacity • Conductor charts |
| 19. Solve problems involving conductor line drop and line loss | <ul style="list-style-type: none"> • Line voltage drop • Line power loss • Conductor sizing |
| 20. Describe the generation of an alternating voltage | <ul style="list-style-type: none"> • Factors affecting generated EMF • Features of alternators • Development of a sine wave voltage |
| 21. Describe the features of alternating current | <ul style="list-style-type: none"> • Advantages of AC • Values of AC • AC terminology • Waveforms and phasor representations |
| 22. Describe the difference between DC ohmic and effective AC resistance | <ul style="list-style-type: none"> • Skin effect • Hysteresis loss • Eddy current loss • Dielectric loss • Radiation loss |

Achievement Criteria

- | | |
|-------------|--|
| Performance | The learner will be able to: perform meter readings to verify circuit concepts |
| Conditions | In a lab setting as part of a practical project |
| Criteria | The learner will be evaluated on: <ul style="list-style-type: none"> • Safety • Achieving the expected meter reading |

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A2 Analyze DC circuits**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of series circuits.
- Analyze series circuits.
- Describe the operating principles of parallel circuits.
- Analyze parallel circuits.
- Describe the operating principles of combination circuits.
- Analyze combination circuits.
- Describe the operating principles of voltage dividers.
- Analyze voltage dividers.
- Describe the operating principles of bridge circuits.
- Analyze bridge circuits.
- Describe the operating principles of three-wire circuits.
- Analyze three-wire circuits.

LEARNING TASKS

1. Describe the characteristics of a series circuit
2. Solve problems involving series circuits
3. Describe effects of voltage sources in series
4. Connect and test series circuits
5. Describe the characteristics of a parallel circuit
6. Solve problems involving parallel circuits

CONTENT

- Connection of components
- Polarity
- Resistance, voltage and current
- Effects of an open
- Circuit applications
- Development of schematic diagrams
- Kirchhoff's Voltage Law
- Resistance, voltage, current and power calculations
- Series aiding EMFs
- Series opposing EMFs
- Component selection
- Circuit connections and measurements
- Testing and troubleshooting
- Connection of components
- Polarity
- Voltage, current and resistance
- Effects of an open
- Circuit applications
- Development of schematic diagrams
- Kirchhoff's Current Law

LEARNING TASKS	CONTENT
	<ul style="list-style-type: none"> Resistance, voltage, current and power calculations Branch current proportionality
7. Describe effects of voltage sources in parallel	<ul style="list-style-type: none"> Polarity and connections Standby (backup) systems

15. Describe the characteristics of a bridge circuit	<ul style="list-style-type: none"> Connection of components Polarity Voltage, current and resistance Wheatstone bridge Applications
16. Solve problems involving bridge circuits	<ul style="list-style-type: none"> Balanced bridge conditions Unbalanced bridge conditions

LEARNING TASKS

CONTENT

- | | |
|---|---|
| 17. Connect and test bridge circuits | <ul style="list-style-type: none"> • Component selection • Circuit connections and measurements • Testing and troubleshooting |
| 18. Describe the features of a three-wire distribution system | <ul style="list-style-type: none"> • CEC • Connection of components • Neutral grounding and safety • Balanced loading • Unbalanced loading • Effect of open (high resistance) neutral • Effect of open (blown fuse) line |
| 19. Solve problems involving three-wire circuits | <ul style="list-style-type: none"> • CEC • Balanced load conditions • Unbalanced load conditions • Open neutral and/or open line conditions |
| 20. Connect and test three-wire circuits | <ul style="list-style-type: none"> • Component selection • Circuit connections and measurements • Testing and troubleshooting |

Achievement Criteria

Performance The learner will be able to: connect and test DC Circuits:

- series circuits
- parallel circuits
- combination circuits
- voltage dividers
- bridge circuits
- three-wire circuits

Conditions In a lab setting as part of a practical project

Criteria The learner will be evaluated on:

- Safety
- Achieving the expected meter readings

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A3 Analyze principles of electromagnetism**

Objectives

To be competent in this area, the individual must be able to:

- Describe the principles of electromagnetism.
- Solve problems involving magnetic circuits.

LEARNING TASKS

1. Describe the characteristics of magnetic lines of force
2. Describe the effects of current carrying conductors and coils
3. Describe terminology and units of measure for magnetic circuits
4. Describe applications of magnetic devices
5. Solve problems involving electromagnetic circuits

CONTENT

- Direction of magnetic fields
- Magnetic loops
- Magnetic tension
- Laws of attraction and repulsion
- Magnetic screens
- Methods of magnetizing and demagnetizing ferromagnetic materials
- Left hand rule for current carrying conductors
- Parallel current carrying conductors
- Left hand rule for coils
- Features of electromagnets
- Magnetomotive force
- Magnetic flux and flux density
- Reluctance and permeability
- Saturation and hysteresis
- Residual magnetism
- Magnetic cores and air gaps
- Lifting magnets
- Solenoids and relays
- Bells and buzzers
- Magnetic circuit breaker
- Field poles for motors and generators
- Magnetomotive force
- Magnetizing force
- Magnetic flux and flux density
- Reluctance and permeability
- Saturation and hysteresis
- Magnetic cores and air gaps

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A6 Analyze electronic circuits**

Objectives

To be competent in this area, the individual must be able to:

- Describe operating principles of diodes in DC circuits.
- Connect and test diodes in DC circuits.
- Describe operating principles of BJTs in DC circuits.
- Connect and test BJTs in DC electronic circuits.

LEARNING TASKS

1. Describe characteristics of semiconductor materials
2. Describe features of the PN junction diode
3. Connect and test PN junction diodes
4. Describe features of the Zener diode
5. Solve problems relating to Zener diodes
6. Connect and test voltage regulation circuits
7. Describe features of photo and light-emitting diodes
8. Connect and test photo and light-emitting diodes
9. Describe features of the bipolar junction transistor
10. Solve problems relating to bipolar junction transistors

CONTENT

- Semiconductor elements
- N-type semiconductor
- P-type semiconductor
- Temperature coefficient
- Voltage and current characteristics
- Leads and polarity
- Specifications and ratings
- Free wheeling diode
- Component selection
- Circuit connections and measurements
- Testing and troubleshooting
- Voltage and current characteristics
- Leads and polarity
- Specifications and ratings
- Voltage regulation
- Component selection
- Circuit connections and measurements
- Testing and troubleshooting
- Voltage and current characteristics
- Leads and polarity
- Specifications and ratings
- Component selection
- Circuit connections and measurements
- Testing and troubleshooting
- NPN and PNP types
- Symbols and lead identification
- Common case styles
- Gain calculations (alpha, beta)

LEARNING TASKS

CONTENT

11. Describe basic applications of the junction transistor in DC circuits

- Current calculations
- Saturation biasing
- Cut-off biasing

12. Describe features of specialty transistors

- DC switch circuit
- Terms and abbreviations
- Ratings and specifications

13. Connect and test bipolar transistors

- Darlington transistors
- Phototransistors
- Component selection
- Circuit connections and measurements
- Testing and troubleshooting

Achievement Criteria

Performance The learner will be able to: connect and test DC Electronic Circuits:

- PN Junction diodes
- Zener diodes
- Light emitting diodes
- Bipolar transistors

Conditions In a lab setting as part of a practical project

Criteria The learner will be evaluated on:

- Safety
- Achieving the expected circuit operation

Line (GAC): **B PERFORM SAFETY-RELATED FUNCTIONS**
Competency: **B1 Use personal protection equipment (PPE) and safety equipment**

Objectives

To be competent in this area, the individual must be able to:

- Describe safety equipment and PPE.
- Apply personal safety precautions and procedures.

LEARNING TASKS

1. Describe PPE

CONTENT

- Types of protection for:
 - Head
 - Hands
 - Lungs
 - Eyes
 - Ears
 - Feet
 - Skin
- Procedures for use
- Storage
- Limitations
- Regulatory requirements
- Environmental considerations
- Types
- Procedures for use
- Storage
- Limitations
- Regulatory requirements
- Personal apparell
 - Clothing
 - Hair and beards
 - Jewellery
- CEC
- Emergency shutoffs
- Fire control systems
- Eye wash facilities
- Emergency exits
- First aid facilities
- Emergency contact/phone numbers
- Muster area

2. Describe safety equipment

3. Apply personal safety precautions and procedures

4. Locate emergency equipment and means of egress

Line (GAC): **B PERFORM SAFETY-RELATED FUNCTIONS**
Competency: **B2 Maintain safe work environment**

Objectives

To be competent in this area, the individual must be able to:

- Apply personal safety measures.
- Identify and control workplace hazards.
- Prevent and identify various classes of fires.

LEARNING TASKS

1. Identify hazards

CONTENT

- Hazards include but are not limited to:
 - Electric shocks
 - Arc flashes
 - Fire
 - Liquid spills
 - Designated substances
 - Open holes
 - Confined spaces
 - Excavations
 - Tripping hazards
 - Overhead work
 - Mobile equipment
 - Hazardous locations
 - Working at heights
 - Ladders
 - Scaffolds
 - Work platforms
 - Dust
 - Fumes
 - Horseplay
 - Environmental
 - Wet
 - Dusty
 - Icy
 - Corrosive
 - Hot
 - Cold
 - Wind
 - Toxic gasses

2. Identify controls for hazards

- CEC
- PPE (See B1)
- Fall protection
- Safety meetings
- Housekeeping

LEARNING TASKS

CONTENT

- | | |
|---|--|
| | <ul style="list-style-type: none"> • Equipment and machine lockout • Hazard signage • Safe ladder use • Ventilation systems • Clear head • Limits of approach • Respect for others' safety • Constant awareness of surroundings |
| 3. Interpret regulations relating to personal health and safety | <ul style="list-style-type: none"> • OH&S • WorkSafeBC • WHMIS (Current version) • Safety Data Sheets (SDS) |
| 4. Describe the conditions necessary to support a fire | <ul style="list-style-type: none"> • Air • Fuel • Heat |
| 5. Describe the classes of fires according to the materials being burned | <ul style="list-style-type: none"> • Class A • Class B • Class C • Class D • Symbols and colours |
| 6. Apply preventative fire safety precautions when working near, handling or storing flammable liquids or gases, combustible materials and electrical apparatus | <ul style="list-style-type: none"> • Fuels <ul style="list-style-type: none"> ○ Diesel ○ Gasoline ○ Propane ○ Natural Gas • Ventilation <ul style="list-style-type: none"> ○ Purging • Lubricants • Oily rags • Combustible metals • Aerosols |
| 7. Describe the considerations and steps to be taken prior to fighting a fire | <ul style="list-style-type: none"> • Warning others and fire department • Evacuation of others • Fire contained and not spreading • Personal method of egress • Training |
| 8. Describe the procedure for using a fire extinguisher | <ul style="list-style-type: none"> • P.A.S.S. <ul style="list-style-type: none"> ○ Pull ○ Aim ○ Squeeze ○ Sweep |

Line (GAC): **B** **PERFORM SAFETY-RELATED FUNCTIONS**
Competency: **B3** **Perform lock-out and tag-out procedures**

Objectives

To be competent in this area, the individual must be able to:

- Describe lockout requirements.
- Perform lock-out and tag-out procedures for various situations.

LEARNING TASKS

1. Describe lockout requirements for various sources of energy

CONTENT

- Electrical
- Hazardous energy
 - Mechanical
 - Gravity
 - Pressure
 - Static
- Hydraulic
 - Steam
 - Pneumatic/vacuum
- Hazardous gases
 - Toxic
 - Flammable
- Procedures
 - Identify
 - Isolate
 - De-energize
 - Verify
 - Test for zero energy
 - Documentation
- Plant requirements
- Use of locks
 - Scissors
 - Breaker locks
 - Cord locks
- Lockout board
- Tags
- Cables
- Key-box system
- Blinding
- Standby person
- Isolation of vessels
- Matching of the lockout to the vessel being worked on

2. Perform lock-out and tag-out

Achievement Criteria

Performance	The learner will be able to perform electrical lockout including verification.
Conditions	<p>The learner will be provided with:</p> <ul style="list-style-type: none"> • Disconnecting means • Scissor • Lock and key • Tag • Multimeter • PPE
Criteria	<p>The learner will be evaluated on:</p> <ul style="list-style-type: none"> • Safety • Successful completion of lockout procedures

Line (GAC):	C	USE TOOLS AND EQUIPMENT
Competency:	C4	Use measuring and testing equipment

Objectives

To be competent in this area, the individual must be able to:

- Use digital meters.
- Interpret digital meter readings.

LEARNING TASKS

1. Describe digital multimeter functions
2. Describe power measurements
3. Use a Megohmmeter to measure insulation resistance
4. Use digital meters

CONTENT

- Digital multimeter (DMM)
- DMM voltmeter functions
 - AC voltage function
 - DC voltage function
- DMM ammeter function
- DMM ohmmeter function
- DMM diode function
- DMM continuity function
- Advanced features
- Digital clamp-on ammeter
- Manual and auto-range
 - Hold function
 - MIN MAX mode
- Digital wattmeter
- Procedure to test
 - Safety
 - Circuit placement
 - Polarity indicator
 - Meter verification
 - DMM voltage measurement
 - AC voltage measurement with DMM
 - DC voltage measurement with DMM
 - DMM current measurement
 - AC current measurement with DMM
 - DC current measurement with DMM
 - Using DMM Ohms function to measure resistance
 - DMM category ratings
 - Meter leads

LEARNING TASKS

5. Maintain digital meters

CONTENT

- Inspection
- Storage
- Calibration
- Service
- Battery replacement
- DMM fuse replacement
- Digital display
- Symbols
- Bar graph readings
- Resolution
- Accuracy
- Counts
- Transient voltages

6. Interpret meter readings

Achievement Criteria

Performance The learner will use a megohmmeter to test insulation integrity

Conditions In a lab setting as part of a practical project

Criteria The learner will be evaluated on:

- Safety
- Accurate measurement of insulation integrity

Line (GAC): **D ORGANIZE WORK**
Competency: **D1 Interpret plans, drawings and specifications**

Objectives

To be competent in this area, the individual must be able to:

- Use residential prints, drawings, manuals and specifications to locate information.
- Use construction drawings to develop a material takeoff.

LEARNING TASKS

Line (GAC): **D ORGANIZE WORK**
Competency: **D2 Use Canadian Electrical Code (CEC)**

Objectives

To be competent in this area, the individual must be able to:

- Interpret codes, regulations and standards.

LEARNING TASKS

1. Describe the purpose of the CEC

2. Describe the general arrangement of CEC rules and regulations

3. Describe the administration of CEC rules and regulations

4. Describe CEC rules and regulations

5. Identify applicable codes and regulations

CONTENT

- CSA requirements
- BC requirements
- Adoption process

- Layout of the CEC book
- Definitions and interpretations

- Electrical Safety Act and Regulations
- Directives
- Information bulletins
- Permits and inspections
- Equipment certification agencies

- Section 0
- Section 2
- Object
- Scope
- Definitions
- Application of general rules

- British Columbia Building Code
- Provincial regulations
- Municipal regulations (bylaws)
- CSA standards

Line (GAC): **G USE COMMUNICATION AND MENTORING TECHNIQUES**
Competency: **G2 Use mentoring techniques**

Objectives

To be competent in this area, the individual must be able to:

- Describe the shared responsibilities for workplace learning.

LEARNING TASKS

1. Describe the shared responsibilities for workplace learning

CONTENT

- Active listening
- Self advocacy
- Apprenticeship training
 - Technical training
 - On-the-job learning
 - Journey person to apprentice ratio
- Pursuing a mentor

Line (GAC):	H	INSTALL AND MAINTAIN CONSUMER/SUPPLY SERVICES AND METERING EQUIPMENT
Competency:	H1	Install single-phase consumer/supply services and metering equipment

Objectives

To be competent in this area, the individual must be able to:

- Determine single-phase service equipment requirements when CTs and PTs are not required.

LEARNING TASKS

1. Describe the features of a single-phase, three-wire distribution system
2. Describe service entrance equipment
3. Determine single-phase service requirements when CTs and PTs are not required.

CONTENT

- CEC
- Circuit connections and grounding
- Metering
- Protection and control
- Shock hazards and safety
- CEC
- Overhead and underground services
- Meter base
- Main service panel
- Grounding and bonding
- CEC
 - Permanent
 - Temporary
- AHJ
- Supply authority

Line (GAC):	H	INSTALL AND MAINTAIN CONSUMER/SUPPLY SERVICES AND METERING EQUIPMENT
Competency:	H3	Maintain single-phase services and metering equipment

Objectives

To be competent in this area, the individual must be able to:

- Describe maintenance procedures for single-phase services and metering equipment.

LEARNING TASKS

1. Describe maintenance procedures for single-phase services and metering equipment

CONTENT

- CEC
- Thermal imaging
- Torque specs
- Aluminum conductors

Line (GAC):	I	INSTALL AND MAINTAIN PROTECTION DEVICES
Competency:	I2	Install ground fault, arc fault and surge protection devices

Objectives

To be competent in this area, the individual must be able to:

- Identify protective devices.
- Determine protective device requirements.

LEARNING TASKS

1. Identify protective devices
2. Determine protective device requirements

CONTENT

- CEC
- Ground Fault Circuit Interrupters (GFCI)
 - Class A ratings
 - Equipment Protective Devices (EPD)
- Arc Fault Circuit Interrupters (AFCI)
- Safety
- Mounting techniques
- CEC

Line (GAC):	J	INSTALL AND MAINTAIN LOW VOLTAGE DISTRIBUTION SYSTEMS
Competency:	J1	Install low voltage distribution equipment

Objectives

To be competent in this area, the individual must be able to:

- Determine single-phase distribution centre requirements.

LEARNING TASKS

1. Identify types of distribution centres
2. Identify components of distribution centres
3. Determine distribution centre requirements

CONTENT

- CEC
- Load centres
- Combination panels
- Splitters
- Switches
- Overcurrent protection
- Overload protection
- Busbars
- Enclosure type
- Enclosure rating
- CEC
- Mounting requirements
- Clearance requirements
- Lug rating
- Torque requirements
- Means of egress
- Ventilation
- Environment

Line (GAC):	L	INSTALL AND MAINTAIN BONDING, GROUNDING AND GROUND FAULT DETECTION SYSTEMS
Competency:	L1	Install grounding and bonding systems

Objectives

To be competent in this area, the individual must be able to:

- Differentiate between grounding and bonding.
- Determine grounding and bonding requirements for DC and single-phase systems.
- Determine the requirements for the installation of grounding and bonding systems according to the CEC.

LEARNING TASKS

CONTENT

1. Describe the objectives of grounding	<ul style="list-style-type: none"> • Limit voltage to ground • Shock hazard • Fire prevention • Overcurrent operation
2. Describe the objectives of bonding	<ul style="list-style-type: none"> • Shock hazard • Overcurrent operation • Eliminate potential differences • Non-electrical equipment
3. Select appropriate materials for grounding and bonding	<ul style="list-style-type: none"> • Raceways • Materials • Electrodes • Conductors • Connections • Equipment
4. Determine grounding and bonding requirements	<ul style="list-style-type: none"> • Sizing • Terminating • Testing

Line (GAC): **Q INSTALL AND MAINTAIN RACEWAYS, CABLES AND ENCLOSURES**

Competency: **Q1 Install conductors and cables**

Objectives

To be competent in this area, the individual must be able to:

- Identify conductors and cables for residential circuits.
- Determine conductor and cable requirements in residential circuits.
- Determine the requirements for the installation of conductors and cables according to the CEC.

LEARNING TASKS

1. Identify conductors

CONTENT

- Insulation type
- Insulation temperature
- Insulation voltage rating
- Conductor material
- Solid or stranded
- AWG
- Colour coding
- Conditions of use
- Cable type
 - Armoured
 - Non-metallic sheath
 - Neutral supported
 - Flexible cord

2. Identify cables

- Insulation type
- Insulation temperature
- Insulation voltage rating
- Conductor material
- Solid or stranded
- AWG
- Colour coding
- Conditions of use
- FT rating

3 Determine conductor requirements

- Ampacities
- Derating
- Conditions of use
- Conduit fill
- Voltage rating
- Voltage drop
- Splicing and termination
- Raceways

LEARNING TASKS

4 Determine cable requirements

- Open wiring
- Support
- Mechanical protection
- Clearance
- Spacing
- Colour coding
- Protection
- Insulation testing
- Fire stopping
- Ampacities
- Derating
- Conditions of use
- Voltage rating
- Voltage drop
- Splicing and termination
- Raceways
- Open wiring
- Support
- Mechanical protection
- Clearance
- Spacing
- Colour coding
- Conductor identification
- Protection
- Insulation testing
- FT rating
- Fire stopping
- Strain relief
- Bonding
- Bend radii

Line (GAC):	Q	INSTALL AND MAINTAIN RACEWAYS, CABLES AND ENCLOSURES
Competency:	Q2	Install raceways, boxes and fittings

Objectives

To be competent in this area, the individual must be able to:

- Determine requirements for common raceways, boxes and fittings.

LEARNING TASKS

1. Identify raceways

CONTENT

- Conduit
 - Rigid
 - Rigid PVC
 - Flexible
 - Liquid-tight
- Electrical metallic tubing
- Electrical non-metallic tubing
- Surface raceways
- Boxes
- Cabinets
- Fittings
- CEC
- Environmental considerations
- Mechanical considerations
- Seismic requirements
- Fire stopping
- Manufacturers' specifications
- Bonding
- Support
- Size
- Fill
- Pulling considerations
- Access
- Bending
- Spacing
- Threading
- Underground
- Sealing and draining
- Barriers
- Vapour barriers

2. Identify boxes and fittings

3. Determine the requirements for raceways, boxes, cabinets and fittings

Line (GAC): **R** **INSTALL AND MAINTAIN BRANCH CIRCUITRY**
Competency: **R1** **Install luminaires**

Objectives

To be competent in this area, the individual must be able to:

- Describe the characteristics of light.
- Describe the operation of LED and incandescent lighting.

LEARNING TASKS

1. Describe basic factors affecting vision
2. Describe light characteristics and measurements
3. Describe basic factors in lighting design
4. Describe the construction and features of incandescent lamps
5. Describe basic LED lighting

CONTENT

- Seeing characteristics of the eye
- Size, luminance, contrast and time
- Electromagnetic spectrum and colour
- Illumination measurement
- Fundamental lighting equations
- Control of light
- Efficacies of light sources
- Common lighting terminology
- Light quantity
- Light quality
- Luminaire classifications
- General lighting levels
- Arrangement of lighting
- Choice of equipment
- Maintenance aspects
- Operation
- Constructional features
- Operating characteristics
- Infrared heat lamps
- New trends
- Installation
 - New
 - Renovation
- Maintenance
- Efficacy
- Life
- White light LEDs
- Advantages
- Disadvantages
- Applications

Line (GAC): **R** **INSTALL AND MAINTAIN BRANCH CIRCUITRY**
Competency: **R2** **Install wiring devices**

Objectives

To be competent in this area, the individual must be able to:

- Describe receptacles and switches and their requirements.
- Describe testing of receptacles and switches.

LEARNING TASKS

1. Identify devices

CONTENT

- Switches
 - Ratings
 - Evidence of approval
 - Poles and throws
 - Styles
 - Activation methods
 - Grades
 - Environment
- Receptacles
 - Ratings
 - Evidence of approval
 - Configurations
 - Grades
 - Single/Duplex
 - Isolated ground
 - Environment
- CEC
- Wiring methods
- Environment
- Orientation
- Polarity
- Location
- Spacing
- Finishes
- Bonding
- Support
- Seismic considerations
- Construction specification requirements
- Manufacturers' specifications
- Sensor operation
- Outlet analyzer
- Log records
- Commissioning

2. Determine device installation requirements

3. Describe device testing requirements

Line (GAC): **R** **INSTALL AND MAINTAIN BRANCH CIRCUITRY**
Competency: **R3** **Install lighting controls**

Objectives

To be competent in this area, the individual must be able to:

- Connect and test lighting controls for LED and incandescent.
- Determine the requirements for the installation of lighting controls according to the CEC.

LEARNING TASKS

CONTENT

- | | |
|--|---|
| 1. Describe the control of incandescent and LED lamps | <ul style="list-style-type: none"> • Switches <ul style="list-style-type: none"> ○ Single-pole ○ Three-way ○ Four-way • Switch ratings • Pull-type switches • Dimmer switches |
| 2. Connect and test lighting controls for LED and incandescent | <ul style="list-style-type: none"> • Single-pole • Three-way • Four-way • Dimmer |

Achievement Criteria

Performance	The learner will be able to: connect three-way and four-way switches
Conditions	In a lab setting as part of a practical project
Criteria	The learner will be evaluated on: <ul style="list-style-type: none"> • Safety • Successful operation of switching circuit

Line (GAC):	R	INSTALL AND MAINTAIN BRANCH CIRCUITRY
Competency:	R4	Install lighting standards

Objectives

To be competent in this area, the individual must be able to:

- Describe types of lighting standards.
- Describe the installation of lighting standards.

LEARNING TASKS

1. Describe types of lighting standards
2. Describe installation of lighting standards

CONTENT

- Traffic signal standards
- Roadway lighting standards
- Parking lot lighting standards
- Driveway lighting standards
- Decorative lighting standards
- Security lighting standards
- Sports field lighting standards
- Locations
- Bases
- Access control/theft prevention

Line (GAC): **V INSTALL AND MAINTAIN MOTOR STARTERS AND CONTROLS**

Competency: **V1 Install motor starters and controls**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of manual motor starters.
- Describe the operating principles of magnetic motor starters.
- Describe the operating principles of magnetic motor control circuits.
- Connect manual motor starters.
- Connect magnetic motor starters.
- Connect magnetic motor control circuits.
- Draw wiring and schematic diagrams for AC motor controls.

LEARNING TASKS

1. Describe the features of manual motor starters

2. Draw diagrams for manual AC motor starters

3. Describe safe procedures for working around motors and controls

4. Connect manual motor starters

5. Describe the features of three-phase, AC magnetic motor starters

6. Describe the operation of across-the-line magnetic starters

7. Draw schematic and wiring diagrams for magnetic starters

8. Describe features of control relays

CONTENT

- Toggle switch type
- Pushbutton type
- Drum switch type
- Overload protection
- Under-voltage release
- Starter ratings
- Single-pole switch
- Double-pole switch
- Three-pole switch
- Mechanical hazards
- Electrical hazards
- Equipment selection
- Connection of components
- Contactor types
- Overload relays
- Starter ratings
- Power circuit components
- Control circuit components
- Two-wire control circuits
- Three-wire control circuits
- Comparison of schematic and wiring diagrams
- Wire numbering systems
- Converting between schematic and wiring diagrams
- Control relays

LEARNING TASKS

9. Describe the operation of jogging circuits
10. Describe the operation of reversing magnetic starters

CONTENT

- Latching relays
- Pushbutton circuits
- Selector switch circuits
- Control relay circuits
- Power circuit components
- Control circuit components
- Electrical and mechanical interlocking

Achievement Criteria

- | | |
|-------------|---|
| Performance | The learner will connect a control circuit to achieve forward/reverse control from two locations |
| Conditions | In a lab setting as part of a practical project |
| Criteria | The learner will be evaluated on: <ul style="list-style-type: none">• Safety• Correct operation of the circuit |

Line (GAC):	V	INSTALL AND MAINTAIN MOTOR STARTERS AND CONTROLS
Competency:	V2	Maintain motor starters and controls

Objectives

To be competent in this area, the individual must be able to:

- Describe troubleshooting procedures for motor starters and motor controls.
- Describe maintenance procedures for motor starters and motor controls.

LEARNING TASKS

1. Describe troubleshooting procedures for motor starters and motor controls
2. Describe maintenance procedures for motor starters and motor controls

CONTENT

- Visual inspections
- Analyzing diagrams
- Meter measurements
- Infrared testing
- Common faults
- Preventative maintenance
- Infrared testing

Line (GAC): **AA INSTALL AND MAINTAIN COMMUNICATION SYSTEMS**
Competency: **AA1 Install voice/data/video (VDV) systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe procedures to install a structured cable system.
- Perform termination of data cable.

LEARNING TASKS

1. Describe structured cabling systems

CONTENT

- Data
- Copper
 - STP
 - UTP
 - Coaxial
- Patch block/panels
- Typical topography
- Generic layout of structured cable systems
- Standards
- Construction of cable
- CEC
- Cable layout
- Installation techniques
- Tools
- Colour coding
- Support systems and pathways
- Placing cable
- Terminations of cables
- Bonding
- Fire stopping

2. Describe procedures to install a structured cable system

Achievement Criteria

Performance	The learner will terminate both ends of a twisted pair cable with RJ45 connectors. The learner will use a BIX tool or 110 tool to perform the termination. The termination will be verified with a wire map tool. The termination will be performed to the TIA standard.
Conditions	In a lab setting as part of a practical project.
Criteria	The learner will be evaluated on: <ul style="list-style-type: none"> • Safety • Correct mapping • Meeting TIA standard

Level 2

Electrician Common Core

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A1 Use electrical circuit concepts**

Objectives

To be competent in this area, the individual must be able to:

- Describe the principles of inductance and inductive reactance.
- Describe the principles of capacitance and capacitive reactance.
- Solve problems using applied mathematics.
- Solve problems involving resistors, inductors, and capacitors in DC and AC circuits.

LEARNING TASKS

CONTENT

- | | |
|--|---|
| 1. Describe terminology associated with triangles | <ul style="list-style-type: none"> • Angles • Types of triangles • Symbols and labels • Pythagorean theorem |
| 2. Describe the relationship between sides and angles for right triangles | <ul style="list-style-type: none"> • Ratios of sides and angles • Sine function • Cosine function • Tangent function • Pythagorean theorem |
| 3. Solve problems involving right triangles by applying basic trigonometry | <ul style="list-style-type: none"> • Lines, angles and triangles • Trig functions • Pythagorean theorem |
| 4. Describe standard conventions related to vectors | <ul style="list-style-type: none"> • Quadrants and coordinates • Direction and polarity • Rectangular and polar expressions • Vector rotation • Lead and lag relationships |
| 5. Solve problems involving vectors | <ul style="list-style-type: none"> • In-phase vectors • Out-of-phase vectors • Vector additions |
| 6. Solve problems involving AC values | <ul style="list-style-type: none"> • Conversion of AC values • Ohm's Law and power calculations • Frequency and period calculations |
| 7. Describe the principles of electromagnetic induction | <ul style="list-style-type: none"> • Factors affecting induced EMF • Lenz's Law • Self-inductance • Mutual inductance |
| 8. Describe the features of inductors | <ul style="list-style-type: none"> • Factors affecting inductance • Construction and types of inductors |

LEARNING TASKS	CONTENT
9. Describe the action of inductors in DC circuits	<ul style="list-style-type: none"> • Units and terminology • Counter EMF and current flow • Inductive time constants • Energy discharge and arc suppression
10. Solve problems involving inductors in DC circuits	<ul style="list-style-type: none"> • Inductors in series • Inductors in parallel • Time constant curves

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A4 Analyze single-phase AC circuits**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of single-phase AC series circuits.
- Analyze single-phase AC series circuits.
- Describe the operating principles of single-phase AC parallel circuits.
- Analyze single-phase AC parallel circuits.
- Describe the principles of power factor correction.
- Solve problems involving power factor correction.
- Insert capacitors for power factor correction.

LEARNING TASKS

1. Describe the effects of a series AC circuit containing resistance and inductance (R-L)
2. Describe the effects of a series AC circuit containing resistance and capacitance (R-C)
3. Describe the effects of a series AC circuit containing resistance, inductance and capacitance (R-L-C)
4. Solve problems and describe applications involving series AC circuits
5. Connect and test series AC circuits
6. Describe the effects of a parallel AC circuit containing branches of resistance and inductance (R-L)
7. Describe the effects of a parallel AC circuit containing branches of resistance and capacitance (R-C)
8. Describe the effects of a parallel AC circuit containing branches of resistance, inductance and capacitance (R-L-C)

CONTENT

- Current and voltage phase relationships
- Impedance and lagging power factor
- Vector diagrams
- Current and voltage phase relationships
- Impedance and leading power factor
- Vector diagrams
- Current and voltage phase relationships
- Impedance and power factor
- Vector diagrams

Achievement Criteria

Performance	<p>The learner will be able to: connect and test AC circuits:</p> <ul style="list-style-type: none"> • Series RL circuits • Parallel RL circuits • Series RC circuits • Parallel RC circuits • Series RLC circuits • Parallel RLC circuits • Perform power factor correction
Conditions	In a lab setting as part of a practical project
Criteria	<p>The learner will be evaluated on:</p> <ul style="list-style-type: none"> • Safety • Achieving the expected meter readings

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A6 Analyze electronic circuits**

Objectives

To be competent in this area, the individual must be able to:

- Describe the application of diodes in rectifiers.
- Analyze single-phase rectifier circuits.
- Analyze AC electronic circuits that utilize bipolar-junction transistors (BJTs).

LEARNING TASKS

1. Describe the operation of single-phase AC rectifier circuits
2. Describe the operation of filters for rectifier circuits
3. Determine values for rectified power supplies
4. Describe the basic applications of the junction transistor

CONTENT

- Half-wave rectifier circuits
- Full-wave (bi-phase) rectifier circuits
- Full-wave bridge rectifier circuits
- Capacitance filters
- Inductance filters
- Pi filters
- Diode ratings
- Output voltage, current and power values
- Filter devices
- Zener regulators
- Cascaded transistor circuits
- AC/DC amplifier circuit
- Terms and abbreviations

Achievement Criteria

Performance The learner will be able to: connect and test electronic circuits:

- Half wave rectifier
- Full wave rectifier
 - Bridge
 - Bi-phase

Conditions In a lab setting as part of a practical project

Criteria The learner will be evaluated on:

- Safety
- Achieving the expected meter readings

Line (GAC): **D ORGANIZE WORK**
Competency: **D1 Interpret plans, drawings and specifications**

Objectives

To be competent in this area, the individual must be able to:

- Use commercial prints, drawings, manuals and specifications to locate information.

LEARNING TASKS

CONTENT

- | | |
|--|---|
| 1. Describe construction drawings and their major divisions for a commercial setting | <ul style="list-style-type: none"> • Divisions <ul style="list-style-type: none"> ○ Architectural ○ Structural ○ Mechanical ○ Plumbing ○ Electrical |
| 2. Describe electrical working drawings | <ul style="list-style-type: none"> • Working drawings • Electrical site/plot plans • Electrical floor plans • Electrical elevation drawings • Electrical sectional drawings • Electrical detail drawings • “As-built” drawings (record drawings) • Single-phase installations |
| 3. Use prints, drawings and specifications to locate information | <ul style="list-style-type: none"> • CEC • Select drawings • Read specifications • Identify schedules • Identify symbols • Single-phase installations |

Line (GAC):	H	INSTALL AND MAINTAIN CONSUMER/SUPPLY SERVICES AND METERING EQUIPMENT
Competency:	H1	Install single-phase consumer/supply services and metering equipment

Objectives

To be competent in this area, the individual must be able to:

- Determine single-phase service equipment requirements when CTs are required.

LEARNING TASKS

1. Describe the features of a single-phase, three-wire distribution system
2. Determine service entrance requirements

CONTENT

- Circuit connections and grounding
- Metering
 - Meter stacks
- Protection and control
- Shock hazards and safety
- CEC
- Size
- Ampacity
- Overhead and underground services
- Meter base
- Grounding and bonding
- Supply authority requirements

Line (GAC):	I	INSTALL AND MAINTAIN PROTECTION DEVICES
Competency:	I1	Install overcurrent protection devices

Objectives

To be competent in this area, the individual must be able to:

- Determine protective device requirements.
- Describe procedures to test protective devices.

LEARNING TASKS

1. Identify protective devices

CONTENT

- Fuses
 - Plug
 - Cartridge
 - Knife blade
 - Time delay
 - Class H (Code)
 - HRC
- Breakers
 - Magnetic (Instantaneous)
 - Thermal
- Overloads
 - Thermal
 - Magnetic
 - Solid state
- Specifications
 - Continuous current
 - Interrupting capacity
 - Voltage rating
 - Time current characteristics
 - Body size

2. Determine protective device requirements

- Rejection features
- CEC
- Fault current calculations
- Load calculations
- Mounting techniques
- Specifications
 - Continuous current
 - Interrupting capacity
 - Voltage rating
 - Body size
 - Rejection features
 - Fuse coordination
 - Series rating

LEARNING TASKS

3. Describe procedures to test protective devices

CONTENT

- Fuse pullers
- Renewable links
- Fuse troubleshooting
 - Criss-cross method
 - Visual inspection

Line (GAC):	I	INSTALL AND MAINTAIN PROTECTION DEVICES
Competency:	I2	Install ground fault, arc fault and surge protection devices

Objectives

To be competent in this area, the individual must be able to:

- Describe surge protection device ratings and installation practices.

LEARNING TASKS

1. Describe surge protection devices

CONTENT

- CEC
- Zener diodes
- Thyrite
- Metal Oxide Varistor (MOV)
- Energy rating
- Voltage rating
- Location

2. Describe surge protection device ratings

3. Describe installation of surge protection devices

Line (GAC):	L	INSTALL AND MAINTAIN BONDING, GROUNDING AND GROUND FAULT DETECTION SYSTEMS
Competency:	L1	Install grounding and bonding systems

Objectives

To be competent in this area, the individual must be able to:

- Determine grounding requirements for single-phase AC systems.
- Determine bonding requirements.
- Determine the requirements for the installation of grounding and bonding systems according to the CEC.

LEARNING TASKS

1. Determine grounding requirements for single-phase AC systems

2. Determine bonding requirements

3. Describe specialty bonding applications

CONTENT

- Sizing
- Terminating
- Conductors
- Lightning protection
- Neutral grounding device
- Testing

- Sizing
- Terminating
- Conductors
- Livestock buildings
- Resistance grounding
- Non-electrical components

Line (GAC):	N	INSTALL AND MAINTAIN RENEWABLE ENERGY GENERATING AND STORAGE SYSTEMS
Competency:	N1	Install renewable energy generating and storage systems

Objectives

To be competent in this area, the individual must be able to:

- Describe renewable energy systems.
- Determine the requirements for the installation of renewable energy generating and storage systems according to the CEC.

LEARNING TASKS

1. Describe renewable energy systems

CONTENT

- Types
 - Wind-generated
 - Biomass
 - Photovoltaic
 - Hydrokinetic
 - Fuel cells
- Operation
- Characteristics

Line (GAC):	P	INSTALL AND MAINTAIN TRANSFORMERS
Competency:	P1	Install extra-low and low voltage single-phase transformers

Objectives

To be competent in this area, the individual must be able to:

- Describe connection and operation of transformers in parallel.
- Describe the effects of loads on voltage-regulation.
- Describe tap-changer equipment.
- Connect single-phase transformers.
- Connect auto transformers.
- Connect multi-tap and tap changer transformers.
- Connect instrument transformers.
- Determine the installation requirements for single-phase transformers according to the CEC.

LEARNING TASKS

1. Describe the differences between extra-low and low voltage transformers
2. Describe transformer types and applications
3. Describe the operating principles of a single-phase transformer
4. Calculate transformer values using ratios
5. Describe transformer markings and ratings
6. Determine the polarity and markings for transformers

CONTENT

- Characteristics
- Ratings
- Applications
- Remote control and signal transformers
- Power and distribution transformers
- Instrument transformers
- Autotransformers
- Special transformers
- Mutual induction
- Basic construction
- Voltage, current and flux relationships
- Turns ratios
- Transformer symbols
- Terminology
- Voltage, current and turns ratios
- Volt-ampere ratings
- Impedance matching
- High voltage leads
- Low voltage leads
- Transformer losses and efficiency
- Use of nameplate data
- Additive and subtractive polarity
- Polarity tests
- Terminal identification

LEARNING TASKS	CONTENT
7. Configure transformers for step-down and step-up applications	<ul style="list-style-type: none"> • Equipment selection • Circuit configuration • Circuit measurements
8. Describe the various connections and applications for multi-coil transformers	<ul style="list-style-type: none"> • Dual-primary connections • Dual-secondary connections • Distribution transformers • Parallel operation
9. Interpret nameplate information	<ul style="list-style-type: none"> • Common ratings listed • Determining currents • Installation requirements • “K” ratings
10. Solve problems involving transformer calculations	<ul style="list-style-type: none"> • Voltage, current and turns ratios • kVA ratings • Percent impedance and fault currents
11. Connect transformers	<ul style="list-style-type: none"> • Equipment selection • Circuit connections and measurements • Mounting • Seismic • Testing and troubleshooting
12. Describe the effects of load on a transformer	<ul style="list-style-type: none"> • Percent voltage regulation • Resistive loads • Inductive loads • Capacitive loads
13. Describe the application of multi-tap windings and tap changers	<ul style="list-style-type: none"> • Primary taps and turns-ratio • Secondary taps and turns-ratio • Tap changers
14. Calculate values involving multi-tap and tap changer transformers	<ul style="list-style-type: none"> • Voltage, current and turns ratios • Percent voltage regulation
15. Connect multi-tap and tap changer transformers	<ul style="list-style-type: none"> • Equipment selection • Circuit connections and measurements • Testing and troubleshooting
16. Describe constructional features and applications of autotransformers	<ul style="list-style-type: none"> • Step-down autotransformers • Step-up autotransformers • Multi-tap autotransformers • Variable autotransformers • Safety hazards
17. Describe how standard two-winding transformers can be connected as autotransformers	<ul style="list-style-type: none"> • Buck-boost connections • Step-type voltage regulators

| 23. Connect instrument transformer circuits | <ul style="list-style-type: none"> • Equipment selection • Circuit connections • Circuit measurements • Testing and troubleshooting |

Achievement Criteria 1

Performance The learner will :

- Connect a single-phase transformer
 - Perform an open-circuit test
 - Perform a short-circuit test

Conditions In a lab setting as part of a practical project

Criteria The learner will be evaluated on:

- Safety
- Identification of correct transformer polarity
- Identification of correct transformer impedance

Achievement Criteria 2

Performance	The learner will perform at least 2 of the following: <ul style="list-style-type: none">• Connect single-phase transformers in parallel• Connect single-phase transformers as three-wire circuits• Connect isolated winding transformer in buck-and-boost configurations• Connect CTs
Conditions	In a lab setting as part of a practical project
Criteria	The learner will be evaluated on: <ul style="list-style-type: none">• Safety• Correct transformer connection

Line (GAC):	Q	INSTALL AND MAINTAIN RACEWAYS, CABLES AND ENCLOSURES
Competency:	Q1	Install conductors and cables

Objectives

To be competent in this area, the individual must be able to:

- Identify conductors and cables for commercial, institutional and industrial circuits.
- Determine conductor and cable requirements for commercial, institutional and industrial circuits.

LEARNING TASKS

1. Identify conductors

2. Identify cables

3. Determine conductor requirements

CONTENT

- Insulation types
- Insulation temperature
- Insulation voltage rating
- Conductor material
- Solid or stranded
- AWG
- Colour coding
- Conditions of use
- Cable types
- Insulation types

Line (GAC):	Q	INSTALL AND MAINTAIN RACEWAYS, CABLES AND ENCLOSURES
Competency:	Q3	Maintain conductors, cables, raceways, boxes and fittings

Objectives

To be competent in this area, the individual must be able to:

- Describe the removal of unused conductors and cables.
- Describe maintenance procedures for conductors and cables.

LEARNING TASKS

1. Describe the removal of unused conductors, cables, raceways, boxes and fittings
2. Describe maintenance procedures for conductors and cables

CONTENT

- Scope of work
 - Limits of removal
 - Maintaining system integrity
- Document update
- Safety
 - Electrical lockout
 - Health hazards
- Disposal
- Thermal imaging
- Torque specs

Line (GAC): **R** **INSTALL AND MAINTAIN BRANCH CIRCUITRY**
Competency: **R1** **Install luminaires**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operation of discharge lighting.

LEARNING TASKS

1. Describe the operation and construction of discharge lighting
2. Describe installation requirements for discharge lighting
3. Describe the construction and features of high-intensity discharge lamps
4. Describe the components of high-intensity discharge luminaires
5. Describe induction lighting

CONTENT

- Types
 - Fluorescent
 - High pressure sodium
 - Metal halide
- Operation characteristics
- Constructional features
- Control of discharge lighting
- Fixtures used as raceways
- Metal-halide lamps
- High-pressure sodium lamp
- Interchangeable HID lamps
 - Shapes and sizes
 - ANSI code designations
- Electronic ballast
- Autotransformer ballast
- Auto-regulator ballast
- Regulator ballast
- High-pressure sodium ballasts
- Polarization of lamp-holder
- Ballast location
- Controls
- Principles of operation
- Induced current in the lamp bulb
- Efficacy
- Life
- Advantages
- Disadvantages
- Applications

Line (GAC):	R	INSTALL AND MAINTAIN BRANCH CIRCUITRY
Competency:	R2	Install wiring devices

Objectives

To be competent in this area, the individual must be able to:

- Describe single-phase wiring devices and their requirements.

LEARNING TASKS

1. Identify devices
2. Determine device installation requirements
3. Describe procedures to test devices

CONTENT

- Disconnecting means
- Isolation switch
- Capacitors
- Splitters
- Utilization equipment
- CEC
- Wiring methods
- Environment
- Orientation
- Polarity
- Location
- Finishes
- Bonding
- Support
- Construction specification requirements
- Manufacturers' specifications
- Documentation
- Commissioning

Line (GAC): **R** **INSTALL AND MAINTAIN BRANCH CIRCUITRY**
Competency: **R3** **Install lighting controls**

Objectives

To be competent in this area, the individual must be able to:

- Describe lighting controls for discharge lighting.

LEARNING TASKS

1. Describe the control of discharge lighting

CONTENT

- Relays
- Contactors
- Time clocks
- Photo cells
- Hand-off-auto control

Line (GAC):	R	INSTALL AND MAINTAIN BRANCH CIRCUITRY
Competency:	R5	Maintain luminaires, wiring devices, lighting controls, lighting standards and branch circuitry

Objectives

To be competent in this area, the individual must be able to:

- Describe troubleshooting procedures for discharge lighting.
- Describe maintenance for discharge lighting.

LEARNING TASKS

1. Describe basic troubleshooting for high-intensity discharge luminaires
2. Describe troubleshooting procedures for discharge lighting circuits
3. Describe maintenance for discharge lighting

CONTENT

- Checking
 - Ballasts
 - Lamps
 - Supply voltage
 - Defective controls
 - Electrical connections
- Ballasts
- Igniter
- Mismatched components
- Cleaning
- Lamp replacement
- Efficacy
- Disposal considerations
 - Mercury
 - Sodium

Line (GAC):	S	INSTALL AND MAINTAIN HEATING, VENTILATING AND AIR-CONDITIONING (HVAC) SYSTEMS
Competency:	S1	Install HVAC systems and controls

Objectives

To be competent in this area, the individual must be able to:

- Describe the components of HVAC systems.
- Describe the application of energy management devices.
- Describe controls for heating, ventilating and air conditioning.
- Determine the installation requirements for heating systems according to the CEC.

LEARNING TASKS

CONTENT

- | | |
|--|--|
| 1. Describe common heating and cooling systems | <ul style="list-style-type: none"> • Types of area climate control <ul style="list-style-type: none"> ○ Electric boilers ○ Baseboard heaters ○ Unit heaters ○ Forced-air furnaces ○ Duct and plenum heaters ○ Series heating cable sets ○ Hot water heating ○ Heat pumps ○ Geothermal • Operation <ul style="list-style-type: none"> ○ Open loop ○ Closed loop • Electronic air cleaners • Humidifiers • System layout • Thermostats and controls |
| 2. Describe the components of HVAC systems | <ul style="list-style-type: none"> • System layout • Power and control circuits • Fans • Pumps • Heat pumps • Dampers • Valves • Heating and cooling equipment |
| 3. Describe the application of energy management devices | <ul style="list-style-type: none"> • Time clocks • Programmable thermostats • Computer-based systems • Meter alarms • Load shedders |

LEARNING TASKS

4. Describe controls for heating, ventilating, and air conditioning

CONTENT

- Selection of components
- System layout
- Circuit connections

Line (GAC):	S	INSTALL AND MAINTAIN HEATING, VENTILATING AND AIR-CONDITIONING (HVAC)SYSTEMS
Competency:	S2	Maintain HVAC systems and controls

Objectives

To be competent in this area, the individual must be able to:

- Describe maintenance procedures for HVAC systems and controls.

LEARNING TASKS

1. Describe maintenance procedures for HVAC systems and controls

CONTENT

- Testing
- Troubleshooting
- Filters
- Motors
- Flame-proving device

Line (GAC):	T	INSTALL AND MAINTAIN EXIT EMERGENCY LIGHTING SYSTEMS
Competency:	T1	Install exit and emergency lighting systems

Objectives

To be competent in this area, the individual must be able to:

- Describe exit and emergency lighting systems.
- Determine the requirements for the installation of exit and emergency lighting systems according to the CEC.

LEARNING TASKS

1. Identify types of exit and emergency lighting systems
2. Describe battery requirements for exit and emergency lighting systems

CONTENT

- Emergency lighting equipment
 - Unit lighting
 - Exit lighting
- Battery banks
 - Unit equipment
- Types
- Charging

Line (GAC):	T	INSTALL AND MAINTAIN EXIT EMERGENCY LIGHTING SYSTEMS
Competency:	T2	Maintain exit and emergency lighting systems

Objectives

To be competent in this area, the individual must be able to:

- Describe procedures to test exit and emergency lighting systems.
- Describe procedures to maintain exit and emergency lighting systems.

LEARNING TASKS

1. Describe procedures to test exit and emergency lighting systems
2. Describe procedures to maintain exit and emergency lighting systems

CONTENT

- CEC
- Scheduling
- Automatic testing
- Commissioning records
- Load testing
- Lamp replacement
- Cleaning
- Efficacy
- Battery replacement
- Battery disposal considerations

Line (GAC): **U** **INSTALL AND MAINTAIN CATHODIC PROTECTION SYSTEMS**
Competency: **U1** **Install cathodic protection systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe cathodic protection systems.
- Determine the requirements for cathodic protection according to the CEC.

LEARNING TASKS

1. Describe cathodic protection systems

CONTENT

- Purpose
- Equipment
- Functions
- Locations
- Grounding

Line (GAC): **U** **INSTALL AND MAINTAIN CATHODIC PROTECTION SYSTEMS**
Competency: **U2** **Maintain cathodic protection systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe maintenance of cathodic protection systems.

LEARNING TASKS

1. Describe maintenance of cathodic protection systems

CONTENT

- Preventative
- Reference points
- Sacrificial anode
- Cabling
- Current flow

Line (GAC): **V INSTALL AND MAINTAIN MOTOR STARTERS AND CONTROLS**

Competency: **V1 Install motor starters and controls**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of common control devices.
- Describe the operating principles of magnetic motor starters.
- Describe the operating principles of magnetic motor control circuits.
- Connect magnetic motor starters.
- Connect magnetic motor control circuits.
- Draw wiring and schematic diagrams for AC motor controls.

LEARNING TASKS

1. Describe features of common control devices

2. Describe features and applications of plugging switches

3. Draw circuit diagrams involving automatic and sequence control

4. Describe the features of three-phase, AC magnetic motor starters

5. Describe the operation of across-the-line magnetic starters

CONTENT

- Pressure switches
- Float switches
- Flow switches
- Temperature switches
- Limit switches
- Proximity switches
- Photoelectric switches

- Zero-speed switches
- Lockout relay
- Control circuits
 - Anti-plugging
 - Plugging

- Definite sequence control
- Timed sequence control
- Anti-plugging and plugging using timing relays
- Pump motor control
- Reversing starter control
- Other applications

- Contactor types
- Overload relays
- Starter ratings

- CEC
- Power circuit components
- Control circuit components
- Two-wire control circuits
- Three-wire control circuits

LEARNING TASKS

6. Draw schematic and wiring diagrams for magnetic starters
7. Describe features of control relays
8. Describe the operation of jogging circuits

CONTENT

- Comparison of schematic and wiring diagrams
- Wire numbering systems
- Converting between schematic and wiring diagrams
- Control relays
- Smart relays
- Timing relays
- Latching relays
- CEC
- Pushbutton circuits
- Selector switch circuits
- Control relay circuits

Achievement Criteria

- | | |
|-------------|---|
| Performance | The learner will connect a control circuit to achieve a forward/reverse anti-plugging circuit from two locations using timers. |
| Conditions | In a lab setting as part of a practical project |
| Criteria | The learner will be evaluated on: <ul style="list-style-type: none">• Safety• Correct operation of the circuit |

Line (GAC):	V	INSTALL AND MAINTAIN MOTOR STARTERS AND CONTROLS
Competency:	V2	Maintain motor starters and controls

Objectives

To be competent in this area, the individual must be able to:

- Describe troubleshooting procedures for motor starters and motor controls.
- Describe maintenance procedures for motor starters and motor controls.

LEARNING TASKS

1. Describe troubleshooting procedures for motor starters and motor controls
2. Describe maintenance procedures for motor starters and motor controls

CONTENT

- Visual inspections
- Analyzing diagrams
- Meter measurements
- Infrared testing
- Common faults
- Preventative maintenance
- Infrared testing

Level 3

Electrician Common Core

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A5 Analyze three-phase AC circuits**

Objectives

To be competent in this area, the individual must be able to:

- Describe the characteristics of three-phase AC circuits.
- Calculate voltage, current, impedance, power and power factor in three-phase AC circuits.
- Calculate power factor correction of three-phase AC circuits.

LEARNING TASKS

CONTENT

- | | |
|---|--|
| 1. Describe the characteristics of three-phase AC systems | <ul style="list-style-type: none"> • Generation of three-phase voltage • Phase sequence • Phasor representations • Advantages |
| 2. Describe characteristics of the wye connection | <ul style="list-style-type: none"> • CEC • Source connections • Voltage and current relationships • Power and power factor • Neutral and grounding |
| 3. Describe characteristics of the delta connection | <ul style="list-style-type: none"> • CEC • Source connections • Voltage and current relationships • Power and power factor • Three-phase, four-wire delta systems |
| 4. Calculate voltage, current and power for balanced three-phase circuits | <ul style="list-style-type: none"> • Wye source, wye load • Wye source, delta load • Delta source, delta load • Delta source, wye load |
| 5. Calculate the neutral current in wye-connected circuits | <ul style="list-style-type: none"> • CEC • Balanced three-phase, four-wire loads • Unbalanced three-phase, four-wire loads • Current phasors • Use of two phases and common |
| 6. Describe the effects of an open in three-phase wye and delta circuits | <ul style="list-style-type: none"> • Single-phasing • Open line conditions • Open load conditions |

LEARNING TASKS

7. Connect and test three-phase circuits

8. Calculate power and power factor in balanced three-phase systems

9. Describe the connection of capacitors for three-phase, power factor correction

10. Calculate the ratings of capacitors for three-phase, power factor correction

CONTENT

- Selection of components
- Circuit connections and measurements
- Test equipment
 - Power factor meters
 - VAR meters
- Testing and troubleshooting
- Power in balanced systems
- Power factor in balanced systems
- Wattmeter connections for power measurements
- Wye-connected capacitor banks
- Delta-connected capacitor banks
- Safety hazards
- Capacitor values for PF correction
- Resulting line current values

Achievement Criteria

Performance	The learner will be able to: perform meter readings to verify three-phase circuit concepts
Conditions	In a lab setting as part of a practical project
Criteria	The learner will be evaluated on: <ul style="list-style-type: none"> • Safety • Achieving the expected meter reading

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A6 Analyze electronic circuits**

Objectives

To be competent in this area, the individual must be able to:

- Describe operating principles of field effect transistors (FETs) and insulated gate bipolar transistors (IGBTs).
- Analyze electronic circuits that utilize FETs and IGBTs.
- Describe thyristor circuits.
- Describe rectification circuits.
- Describe logic gates.
- Describe number systems.
- Connect and test thyristor circuits.
- Connect and test rectifier circuits.
- Calculate values for rectified power supplies.

LEARNING TASKS

1. Describe the features of field effect transistors and IGBTs
2. Describe features of the silicon controlled rectifier (SCR)
3. Describe the function of the SCR
4. Describe SCR triggering circuits for AC phase control
5. Describe features of the triac
6. Describe features of specialty thyristors

CONTENT

- Amplifier circuit
- Terms and abbreviations
- Ratings and specifications
- Channel types
- Advantages/disadvantages
- Data sheets
- Symbols and lead identification
- Common case styles
- Symbol and lead identification
- Case styles
- Specifications and ratings
- Voltage and current characteristics
- DC circuit action
- AC circuit action
- Terms and definitions
- Resistance triggering
- Resistance-capacitance triggering
- Phase control circuits
- Symbol and lead identification
- Case styles
- Voltage and current characteristics
- Ratings and specifications
- DIAC
- Unijunction transistor

LEARNING TASKS	CONTENT
7. Describe the application of thyristors	<ul style="list-style-type: none"> • Light-activated SCR • Gate turnoff thyristors (GTOs) • Oscillator circuits • Battery charging circuits • Lamp dimmer circuits • Motor control circuits
8. Connect and test thyristor circuits	<ul style="list-style-type: none"> • Selection of components • Circuit connections and measurements • Testing and troubleshooting
9. Describe the operation of three-phase AC rectifier circuits	<ul style="list-style-type: none"> • Three-phase, half-wave rectifiers • Three-phase, full-wave rectifiers • Three-phase, SCR converter circuits
10. Calculate values for rectified power supplies	<ul style="list-style-type: none"> • Diode/SCR ratings • Output voltage, current and power values • Filter devices
11. Connect and test rectifier circuits	<ul style="list-style-type: none"> • Component selection • Circuit connections and measurements • Testing and troubleshooting
12. Describe the causes of static electricity and the effect of electrostatic discharge (ESD)	<ul style="list-style-type: none"> • Effects on solid state devices
13. Describe common number systems used in digital electronics	<ul style="list-style-type: none"> • Decimal system • Octal system • Binary system • Hexadecimal system • Binary-coded-decimal • Number conversions
14. Describe the operation of common logic gates	<ul style="list-style-type: none"> • Types • Functions

Achievement Criteria

Performance	The learner will: connect three-phase rectifiers <ul style="list-style-type: none"> • Three-phase half-wave • Three-phase full-wave
Conditions	In a lab setting as part of a practical project
Criteria	The learner will be evaluated on: <ul style="list-style-type: none"> • Safety • Achieving the expected circuit operation

Line (GAC):	C	USE TOOLS AND EQUIPMENT
Competency:	C4	Use measuring and testing equipment

Objectives

To be competent in this area, the individual must be able to:

- Identify causes of poor power quality.
- Describe the use of power quality analyzers.

LEARNING TASKS

1. Identify problems with power quality
2. Identify possible causes of poor power quality
3. Describe the use of power quality analyzers

CONTENT

- Sags (dips)
- Swells
- Transient over voltages
- Harmonics
- Flicker
- Voltage regulation
- Frequency variations
- High frequency noise
- Extremely fast transients (EFTs)
- Unbalance
- Sags and swells
 - Abrupt load changes
 - Abrupt impedance changes
 - Poor connections
- Low frequency transients
 - Capacitor switching
- High frequency transients
 - Lightning
 - Inductive loads
- EFTs
 - Arcing faults
 - Bad brushes
- Harmonics
 - Transformers
 - Switching power supplies
- Tests
 - Voltage unbalance
 - Total harmonic distortion
 - Increasing phase current
 - Voltage sags/swells
 - Peak demand
 - Power factor and reactive demand
- Interpretation of test results and graphs

Line (GAC): **D ORGANIZE WORK**
Competency: **D1 Interpret plans, drawings and specifications**

Objectives

To be competent in this area, the individual must be able to:

- Use institutional prints, drawings, manuals and specifications to locate information.

LEARNING TASKS

CONTENT

- | | |
|---|--|
| 1. Describe construction drawings and their major divisions for an institutional setting | <ul style="list-style-type: none"> • Divisions <ul style="list-style-type: none"> ○ Architectural ○ Structural ○ Mechanical ○ Plumbing ○ Electrical |
| 2. Describe electrical working drawings | <ul style="list-style-type: none"> • Working drawings • Electrical site/plot plans • Electrical floor plans • Electrical elevation drawings • Electrical sectional drawings • Electrical detail drawings • “As-built” drawings (record drawings) • Three-phase installations |
| 3. Use prints, drawings and specifications to locate information for institutional settings | <ul style="list-style-type: none"> • CEC • Select drawings • Read specifications • Identify schedules • Identify symbols • Three-phase installations |

Line (GAC):	H	INSTALL AND MAINTAIN CONSUMER/SUPPLY SERVICES AND METERING EQUIPMENT
Competency:	H2	Install three-phase consumer/supply services and metering equipment

Objectives

To be competent in this area, the individual must be able to:

- Determine three-phase service equipment requirements.

LEARNING TASKS

1. Describe the features of a three-phase service and metering systems
2. Determine service entrance requirements
3. Determine low-voltage, three-phase service requirements

CONTENT

- Circuit connections and grounding
- Metering
- Protection and control
- Shock hazards and safety
- Three-phase, four-wire systems
- Three-phase, three-wire systems
- CEC
- Size
- Ampacity
- Overhead and underground services
- Meter base
- Grounding and bonding
- Supply authority requirements
- CEC
- Permanent
- Temporary

Line (GAC):	H	INSTALL AND MAINTAIN CONSUMER/SUPPLY SERVICES AND METERING EQUIPMENT
Competency:	H4	Maintain three-phase services and metering equipment

Objectives

To be competent in this area, the individual must be able to:

- Describe maintenance procedures for three-phase services and metering equipment.
- Determine the requirements for the maintenance of three-phase services and metering equipment according to the CEC.

LEARNING TASKS

1. Describe maintenance procedures for three-phase services and metering equipment

CONTENT

- Thermal imaging
- Torque specs

Line (GAC):	J	INSTALL AND MAINTAIN LOW VOLTAGE DISTRIBUTION SYSTEMS
Competency:	J1	Install low voltage distribution equipment

Objectives

To be competent in this area, the individual must be able to:

- Determine three-phase distribution centre requirements.

LEARNING TASKS

1. Identify types of distribution centres
2. Identify components of distribution centres
3. Determine distribution centre requirements

CONTENT

- Load centres
- Combination panels
- Splitters
- Switches
- Motor control centres (MCC)
- Power distribution centres (PDC)
- Overcurrent protection
- Overload protection
- Busbars
- Enclosure type
- Enclosure rating
- CEC
- Mounting requirements
- Clearance requirements
- Lug rating
- Torque requirements
- Means of egress
- Ventilation
- Environment

Line (GAC):	L	INSTALL AND MAINTAIN BONDING, GROUNDING AND GROUND FAULT DETECTION SYSTEMS
Competency:	L1	Install grounding and bonding systems

Objectives

To be competent in this area, the individual must be able to:

- Determine grounding requirements for three-phase AC systems.
- Determine the requirements for the installation of grounding and bonding systems according to the CEC.

LEARNING TASKS

1. Determine grounding requirements for three-phase AC systems
2. Describe system grounding techniques

CONTENT

- Sizing
- Terminating
- Conductors
- Testing
- Features of grounding
- Resistance grounding
- Reactance grounding
- Zigzag grounding
- System grounding components

Line (GAC):	L	INSTALL AND MAINTAIN BONDING, GROUNDING AND GROUND FAULT DETECTION SYSTEMS
Competency:	L3	Install ground fault detection systems

Objectives

To be competent in this area, the individual must be able to:

- Describe ground fault detection systems.
- Determine the requirements for the installation of ground fault detection systems according to the CEC.

LEARNING TASKS

1. Describe ground fault detection systems
2. Describe high impedance ground fault detection

CONTENT

- Three-lamp method
- Resistive
- Reactors
- Zig zag

Line (GAC): **M INSTALL AND MAINTAIN POWER GENERATION SYSTEMS**
Competency: **M1 Install AC generating systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe operating principles of three-phase alternators.
- Connect three-phase alternators.

LEARNING TASKS

1. Describe the constructional features of three-phase alternators
2. Describe operating principles of three-phase alternators
3. Identify common connections for three-phase alternators
4. Describe the conditions for operating alternators in parallel (synchronizing)
5. Connect three-phase alternators

CONTENT

- Revolving armature types
- Revolving field types
- Field excitation and brushless exciters
- Nameplate data
- Frequency control
- Voltage control
- Voltage regulation characteristics
- Terminal marking conventions
- Wye-connected alternators
- Delta-connected alternators
- Exciter field connections
- Conditions for synchronizing
- Synchronizing procedure
- Load sharing characteristics
- CEC
- Equipment selection
- Connections and measurements
- Synchronizing and load sharing

Achievement Criteria

Performance The learner will: connect a three-phase alternator
Conditions In a lab setting as part of a practical project
Criteria The learner will be evaluated on:

- Safety
- Achieving the expected alternator operation

Line (GAC): **M** **INSTALL AND MAINTAIN POWER GENERATION SYSTEMS**
Competency: **M2** **Maintain AC generating systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe maintenance and troubleshooting for alternators.

LEARNING TASKS

1. Describe maintenance and troubleshooting for alternators

CONTENT

- Visual inspections
- Electrical faults
- Mechanical faults
- Brushes
- Slip-rings
- Bearings

Line (GAC): **M** **INSTALL AND MAINTAIN POWER GENERATION SYSTEMS**
Competency: **M3** **Install DC generating systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe the characteristics of DC generators.
- Describe the operating principles of DC generators.

LEARNING TASKS

1. Describe the constructional features of DC generators

2. Describe the operating principles of generators

3. Describe the characteristics of the various types of DC generators

CONTENT

- Armature and commutator
- Field poles and coils
- Brushes and rigging
- Frames and bearings

- Factors affecting induced voltage
- Methods of field excitation
- Requirements for voltage build-up
- Armature reaction and interpoles
- Voltage regulation
- Motor effect in generators

- Series generator
- Shunt generator
- Compound generators

Line (GAC): **M** **INSTALL AND MAINTAIN POWER GENERATION SYSTEMS**
Competency: **M4** **Maintain DC generating systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe the maintenance of DC generators.

LEARNING TASKS

1. Describe basic maintenance and troubleshooting procedures for DC generators

CONTENT

- Mechanical checks
- Electrical checks
- Visual inspections
- Electrical faults
- Mechanical faults
- Brush selection
- Commutator maintenance

Line (GAC):	P	INSTALL AND MAINTAIN TRANSFORMERS
Competency:	P3	Install low-voltage three-phase transformers

Objectives

To be competent in this area, the individual must be able to:

- Describe applications of three-phase auto transformers.
- Describe three-phase applications of instrument transformers.
- Calculate voltage, current and kVA values for three-phase transformer banks.
- Calculate voltage, current and kVA values for three-phase autotransformer circuits.
- Calculate instrument transformer ratings and meter readings in three-phase circuits.
- Connect three single-phase transformers as a three-phase bank.
- Connect three-phase autotransformers.
- Connect instrument transformers in three-phase circuits.
- Determine the requirements for low-voltage three-phase transformers according to the CEC.

LEARNING TASKS

1. Describe the construction and features of three-phase transformers
2. Describe the connections of three-phase transformer banks
3. Calculate voltage, current and kVA values for three-phase transformer banks
4. Connect three single-phase transformers as a three-phase bank
5. Describe common connections for autotransformers in three-phase circuits

CONTENT

- Core and coil assemblies
- Insulation and cooling
- Advantages and disadvantages
- Wye-wye connection
- Delta-delta connection
- Wye-delta connection
- Delta-wye connection
- Special four-wire delta connection
- Open-wye and open-delta connections
- Step-down and step-up applications
- Wye and delta configurations
- Phase and line values
- Percent impedance and short circuit currents
- Equipment selection
- Circuit connections
- Circuit measurements
- Mounting
- Wye connection
- Delta connection
- Open-delta connection
- Extended-delta connection
- Zigzag connection

LEARNING TASKS
CONTENT

- | | |
|--|---|
| 6. Calculate voltage, current and kVA values for three-phase autotransformer circuits | <ul style="list-style-type: none"> • Wye connected autotransformer • Open-delta connected autotransformer • Buck-boost connections |
| 7. Connect three-phase autotransformers | <ul style="list-style-type: none"> • Equipment selection • Circuit connections • Circuit measurements |
| 8. Describe instrument transformer connections in three-phase circuits | <ul style="list-style-type: none"> • Potential transformer connections • Current transformer connections • Energy and power metering circuits • Motor protection circuits • Ground-fault detection circuits |
| 9. Calculate instrument transformer ratings and meter readings in three-phase circuits | <ul style="list-style-type: none"> • Potential transformer ratings and voltmeter multipliers and readings • Current transformer ratings and ammeter multipliers and readings • Power and energy meter multipliers and readings |
| 10. Connect instrument transformers in three-phase circuits | <ul style="list-style-type: none"> • Equipment selection • Circuit connections • Circuit measurements • Mounting • Safety |

Achievement Criteria

- | | |
|-------------|---|
| Performance | The learner will connect three single-phase transformers as a three-phase bank in a delta-wye configuration |
| Conditions | In a lab setting as part of a practical project |
| Criteria | The learner will be evaluated on: <ul style="list-style-type: none"> • Safety • Phase displacement • Phase configuration |

Line (GAC):	P	INSTALL AND MAINTAIN TRANSFORMERS
Competency:	P5	Install high-voltage transformers

Objectives

To be competent in this area, the individual must be able to:

- Describe high-voltage transformer circuits.
- Calculate voltage, current and kVA values for high-voltage transformer banks.
- Calculate instrument transformer ratings and meter readings in high-voltage circuits.
- Describe the installation of high-voltage instrument transformers.
- Determine the requirements for high-voltage three-phase transformers according to the CEC.

LEARNING TASKS

1. Describe the construction and features of high-voltage transformers
2. Describe the connections of high-voltage transformer banks
3. Calculate voltage, current and kVA values for high-voltage transformer banks
4. Calculate instrument transformer ratings and meter readings in high-voltage circuits
5. Describe the installation of high-voltage instrument transformers

CONTENT

- Core and coil assemblies
- Insulation and cooling
- Terminations
- Step-down and step-up applications
- Wye and delta configurations
- Voltage transformer ratings
- Current transformer ratings
- Voltage transformer connections

- Circuit measurements

Line (GAC): **R** **INSTALL AND MAINTAIN BRANCH CIRCUITRY**
Competency: **R2** **Install wiring devices**

Objectives

To be competent in this area, the individual must be able to:

- Describe three-phase wiring devices.
- Determine the requirements for three-phase capacitors according to the CEC.

LEARNING TASKS

1. Identify devices

CONTENT

- Disconnecting means
- Isolation switch
- Capacitors
- Splitters
- Utilization equipment

Line (GAC): **V INSTALL AND MAINTAIN MOTOR STARTERS AND CONTROLS**

Competency: **V1 Install motor starters and controls**

Objectives

To be competent in this area, the individual must be able to:

- Describe three-phase motor starters and controls.
- Connect reduced voltage starters.
- Connect wound-rotor motor controllers.
- Connect synchronous motor starters.
- Connect motor braking and deceleration controls.
- Describe the operation of magnetic DC motor controllers.
- Determine the requirements for reduce voltage starters according to the CEC.

LEARNING TASKS

1. Select AC motor starting equipment
2. Describe primary impedance type starters
3. Describe the operation of autotransformer type starters
4. Describe the operation of wye-delta type starters
5. Connect reduced voltage starters
6. Describe automatic acceleration of wound-rotor motors
7. Connect wound-rotor motor controllers
8. Describe the special control features for synchronous motor starters

CONTENT

- Full-voltage starting
- Reduced-voltage starting
- Motor current and torque
- Load requirements
- Duty cycles and supply requirements
- Resistor starting
- Reactor starting
- Wye-connection
- Open-delta connection
- Open and closed transition types
- Current-torque characteristics
- Schematic and wiring diagrams
- Open and closed transition types
- Current-torque characteristics
- Schematic and wiring diagrams
- Equipment selection
- Connection of components
- Definite-time acceleration
- Speed-sensing acceleration
- Reversing
- Speed regulators
- Regeneration
- Schematic and wiring diagrams

| 11. Describe braking methods | <ul style="list-style-type: none"> • Friction braking • Plugging • Dynamic braking • Regenerative braking • Eddy-current braking • Schematic and wiring diagrams |
| 12. Connect motor braking and deceleration controls | <ul style="list-style-type: none"> • Equipment selection • Connection of components |
| 13. Describe the features of DC motor controllers | <ul style="list-style-type: none"> • Manual starters • Faceplate starter • Magnetic starters |
| 14. Describe the operation of magnetic DC motor controllers | <ul style="list-style-type: none"> • Across-the-line starting • Current-limit acceleration • Definite-time acceleration • Field loss protection • Reversing • Speed control |
| 15. Describe methods of deceleration for DC motors | <ul style="list-style-type: none"> • Electromechanical braking • Dynamic braking • Regenerative braking |

Achievement Criteria

- | | |
|-------------|--|
| Performance | The learner will connect a wye-to-delta reduce voltage starter for a three-phase squirrel-cage induction motor with an automatic braking method. |
| Conditions | In a lab setting as part of a practical project |
| Criteria | The learner will be evaluated on: <ul style="list-style-type: none"> • Safety • Circuit drawing • Successful operation of the circuit |

Line (GAC):	V	INSTALL AND MAINTAIN MOTOR STARTERS AND CONTROLS
Competency:	V2	Maintain motor starters and controls

Objectives

To be competent in this area, the individual must be able to:

- Describe maintenance of three-phase motor starters.

LEARNING TASKS

1. Describe basic maintenance and troubleshooting for three-phase motor starters
2. Describe basic maintenance and troubleshooting for three-phase motor controls

CONTENT

- Visual inspections
- Electrical faults
- Mechanical faults
- Visual inspections
- Troubleshooting equipment
- Maintenance procedures

Line (GAC): **W INSTALL AND MAINTAIN DRIVES**
Competency: **W1 Install drives**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operation of electronic motor controls.
- Connect AC drives.
- Connect DC drives.
- Configure AC drives.
- Configure DC drives.

LEARNING TASKS

1. Describe the features of DC drives

2. Describe the operation of power converters

3. Connect adjustable speed DC drives

4. Describe the features of AC soft start controllers

5. Describe the operation of AC soft start controllers

6. Connect AC soft start controllers

7. Describe the features of variable frequency AC drives

8. Describe the operation of inverters

CONTENT

- Control panel features
- Speed and current regulators
- Sizes and ratings
- Start-up and adjustments
- Braking and reversing
- Protection

- Single-phase converters
- Three-phase converters
- Voltage control

- Selection of components
- Circuit connections

- Sizes and ratings
- Advantages
- Start-up and adjustment

- Phase control
- Adjustable parameters
- Start-up and adjustment

- Control panel features
- Sizes and ratings
- Start-up and adjustments

- Single-phase inverters
- Three-phase inverters
- Single-phase to three-phase
- Variable voltage inverters
- Current source inverters
- Flux vector
- Sensorless flux vector
- Pulse width modulation inverters

LEARNING TASKS

9. Describe the operation of AC motors used with variable frequency drives

10. Connect variable frequency AC drives

CONTENT

- Motor types and connections
- Rating
- Applications
- Torque-speed characteristics
- Braking and reversing
- Ventilation
- Protection
- Selection of components
- Circuit connections
- Start-up and adjustment
- Harmonics
- Cabling
- Inductors

Line (GAC): **Y** **INSTALL AND MAINTAIN MOTORS**
Competency: **Y1** **Install AC motors**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of AC motors.
- Connect AC machines.
- Determine the requirements for the installation of AC motors according to the CEC.

LEARNING TASKS

LEARNING TASKS

CONTENT

- Connections and measurements

Achievement Criteria

Performance	The learner will: Connect AC motors <ul style="list-style-type: none"> • Single-phase induction motor • Three-phase induction motor
Conditions	In a lab setting as part of a practical project
Criteria	The learner will be evaluated on: <ul style="list-style-type: none"> • Safety • Achieving the expected motor operation

Line (GAC): Y **INSTALL AND MAINTAIN MOTORS**
Competency: Y2 **Maintain AC motors**

Objectives

To be competent in this area, the individual must be able to:

- Describe basic maintenance and troubleshooting for AC motors.

LEARNING TASKS

1. Describe basic maintenance and troubleshooting for AC motors

CONTENT

- Visual inspections
- Electrical faults
- Mechanical faults
- Brushes and slip-rings
- Bearings

Line (GAC): **Y** **INSTALL AND MAINTAIN MOTORS**
Competency: **Y3** **Install DC motors**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of DC motors.
- Connect DC motors.
- Determine the requirements for the installation of DC motors according to the CEC.

LEARNING TASKS

1. Describe the operating principles of DC motors

2. Describe the features and operating characteristics of the shunt motor

3. Describe the features and operating characteristics of the series motor

4. Describe the features and operating characteristics of the compound motor

5. Connect DC motors

CONTENT

- Right-hand motor rule
- Commutator action and neutral plane
- Torque development
- Counter EMF and armature current
- Mechanical loading effects
- Speed regulation
- Speed control
- Reversing rotation
- Lead identification and connections
- Torque-speed-current characteristics
- Speed control and reversing
- Applications
- Lead identification and connections
- Torque-speed-current characteristics
- Speed control and reversing
- Applications
- Lead identification and connections
- Cumulative and differential compounding
- Torque-speed-current characteristics
- Speed control and reversing
- Applications
- Equipment selection
- Connections and measurements

Achievement Criteria

Performance The learner will: Connect DC motors

- Shunt
- Series
- Compound

Conditions In a lab setting as part of a practical project

Criteria The learner will be evaluated on:

- Safety
- Achieving the expected motor operation

Line (GAC): Y **INSTALL AND MAINTAIN MOTORS**
Competency: Y4 **Maintain DC motors**

Objectives

To be competent in this area, the individual must be able to:

- Describe maintenance and troubleshooting for DC motors.

LEARNING TASKS

1. Describe maintenance and troubleshooting for DC motors

CONTENT

- Visual inspections
- Electrical faults
- Mechanical faults
- Brush and commutator maintenance

Level 4

Construction Electrician

Line (GAC): **A APPLY CIRCUIT CONCEPTS**
Competency: **A6 Analyze electronic circuits**

Objectives

To be competent in this area, the individual must be able to:

- Describe operating principles of logic gates.
- Analyze electronic circuits that use logic gates.
- Describe common circuit applications for the operational amplifier.

LEARNING TASKS

1. Describe the operation of logic gates
2. Describe the operation of special combination logic circuits
3. Describe the features of integrated circuits (IC)
4. Connect and test digital logic circuits
5. Describe the features of operational amplifiers
6. Describe common circuit applications for the operational amplifier

CONTENT

- Truth tables
- Boolean expressions
- DeMorgan's Theorems
- Development of combination circuits
- Flip-flop circuits
- Multivibrator circuits
- Counters and shift registers
- Classifications of ICs
- Pin configuration
- Use of data sheets
- Connections and handling
- Selection of components
- Circuit connections
- Testing and troubleshooting
- Symbols
- Case packages and lead identification
- Amplifier action
- Voltage-follower circuit
- Inverting amplifier circuit
- Non-inverting amplifier circuit
- Summing amplifier circuit

Line (GAC): **D ORGANIZE WORK**
Competency: **D1 Interpret plans, drawings and specifications**

Objectives

To be competent in this area, the individual must be able to:

- Use industrial prints, drawings, manuals and specifications to locate information.

LEARNING TASKS

CONTENT

- | | |
|---|--|
| 1. Describe construction drawings and their major divisions for an industrial setting | <ul style="list-style-type: none"> • Divisions <ul style="list-style-type: none"> ○ Architectural ○ Structural ○ Mechanical ○ Plumbing ○ Electrical |
| 2. Describe electrical working drawings | <ul style="list-style-type: none"> • Working drawings • Electrical site/plot plans • Electrical floor plans • Electrical elevation drawings • Electrical sectional drawings • Electrical detail drawings • “As-built” drawings (record drawings) • Three-phase installations |
| 3. Use industrial prints, drawings and specifications to locate information | <ul style="list-style-type: none"> • CEC • Select drawings • Read specifications • Identify schedules • Identify symbols • Three-phase installations • High voltage installations |

Line (GAC): **D ORGANIZE WORK**
Competency: **D7 Identify hazardous locations**

Objectives

To be competent in this area, the individual must be able to:

- Describe hazardous locations.
- Describe wiring methods for hazardous locations.
- Determine the requirements for hazardous locations according to the CEC.

LEARNING TASKS

CONTENT

- | | |
|--|--|
| 1. Describe hazardous locations | <ul style="list-style-type: none"> • Code definitions <ul style="list-style-type: none"> ○ Section 18 ○ Section 20 |

- Polarity
- Rotation/Phase sequence
- By-pass switches
- Transfer switches
- Grounding
- Voltage drop calculations
 - Wire size
- Seismic requirements
- Ventilation
- Fuel supply
- Conductor requirements
- Barriers

Line (GAC): **K INSTALL AND MAINTAIN POWER CONDITIONING, UNINTERRUPTIBLE POWER SUPPLY (UPS) AND SURGE SUPPRESSION SYSTEMS**

Competency: **K2 Maintain power conditioning, UPS and surge suppression systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe maintenance procedures for emergency power system batteries.
- Describe procedures to test emergency power systems.

LEARNING TASKS

1. Describe maintenance procedures for emergency power system batteries
2. Describe procedures to test emergency power systems

CONTENT

- Maintenance
- Testing
- Scheduling
- Automatic testing
- Commissioning records
- Load testing

Line (GAC):	N	INSTALL AND MAINTAIN RENEWABLE ENERGY GENERATING AND STORAGE SYSTEMS
Competency:	N1	Install renewable energy generating and storage systems

Objectives

To be competent in this area, the individual must be able to:

- Describe alternative power systems.
- Install alternative power systems.
- Test alternative power systems.
- Determine the requirements for the installation of renewable energy generating and storage systems according to the CEC.

LEARNING TASKS

1. Describe alternative power systems

CONTENT

- Types
 - Wind-generated
 - Thermal
 - Photovoltaic
 - Hydrokinetic
 - Fuel cells
- Operation
- Characteristics
- Safety for inter-connected systems
- Selection
- Location for maximum efficiency
- Code requirements and other related standards
 - Signage
 - Supply authority
 - Other associated authorities
- Mounting components
- Power conditioning unit (PCU)
 - Utility interactive inverter
- Connection
 - Grid-tie and stand-alone
- Safety for inter-connected systems
- Commissioning
- Maintenance
- Troubleshooting
- Recording

2. Install alternative power systems

3. Test alternative power systems

Line (GAC): **O INSTALL AND MAINTAIN HIGH VOLTAGE SYSTEMS**
Competency: **O1 Install high voltage systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe the purpose of high voltage safety equipment.
- Describe high voltage safety procedures.
- Describe the construction and operating principles of high voltage cables.
- Describe procedures to install and terminate high voltage cable.
- Describe the operating principles of high voltage switch gear and protective devices.
- Describe procedures to install high voltage switch gear and protective devices.

LEARNING TASKS

1. Describe common terms and concepts associated with high voltage systems

2. Describe features of distribution systems and substation equipment

3. Describe hazards and safety precautions for high voltage installations

4. Interpret CEC rules and supply authority regulations concerning high voltage installations

5. Describe features of high voltage cables

CONTENT

- Voltage classifications
- Effects of electrostatic fields
- Strike and creepage distances
- Tracking and flashovers
- Impulse voltage ratings

- Radial, ring and network systems
- Unit substations and vaults
- Switch yards
- Protection and metering

- Arc blast hazards
 - Z460 and Z462 (CSA standard)
 - Shock and arc flash protection
- Safe switching and key interlocking
- Limits of approach
- Step voltage and touch voltage
- Ground mats
- Isolation mats
- Clearance requirements
- Grounding of structures and equipment
- Station ground electrode
- Lightning arrestors
- Pole bands

- Supply authority regulations
- Use of CEC sections 10, 26 and 36
- Applicable tables in CEC

- Types of dielectrics
- Methods of shielding
- Insulation levels

LEARNING TASKS	CONTENT
6. Describe the construction of common medium-voltage cables	<ul style="list-style-type: none"> • Cable armour • Concentric neutral cable (URD) • Shielded cable • TECK cable • Voltage ratings • AWG size and ampacity
7. Describe practical considerations for high voltage cable installations	<ul style="list-style-type: none"> • Cable pulling techniques • Types of stress relief • Termination classifications • Termination techniques • Cable splicing techniques
8. Interpret CEC rules and regulations concerning wiring methods for high voltage installations	<ul style="list-style-type: none"> • Conductors, cables and raceways • Radii of bends • Spacing and supports • Joints, terminations and shielding • Clearance requirements
9. Describe procedures to install a high voltage, single conductor, solid-dielectric cable	<ul style="list-style-type: none"> • Cable preparation • Stress cone installation • Grounding and shielding
10. Describe the features of high voltage switch gear	<ul style="list-style-type: none"> • Metal-clad and metal-enclosed switch gear • Ratings of switches • Types of operating mechanisms • Types of switches
11. Describe the features of high voltage fuses	<ul style="list-style-type: none"> • Ratings of fuses • Types of high voltage fuses <ul style="list-style-type: none"> ○ Expulsion ○ Non-expulsion ○ Current limiting
12. Describe the features of high voltage AC circuit breakers	<ul style="list-style-type: none"> • Ratings of circuit breakers • Arc suppression • Types of operating mechanisms • Types of circuit breakers and re-closers
13. Describe safety procedures for operating high voltage switches and circuit breakers	<ul style="list-style-type: none"> • Safety lockout procedures and grounding • Arc blast hazards <ul style="list-style-type: none"> ○ Z460 and Z462 (CSA standard) ○ Shock and arc flash protection • Safety inspections • Approved live-line tools • Voltage testing

Line (GAC):	R	INSTALL AND MAINTAIN BRANCH CIRCUITRY
Competency:	R6	Install and maintain airport runway lighting systems

Objectives

To be competent in this area, the individual must be able to:

- Describe installation requirements for airport runway lighting systems.

LEARNING TASKS

1. Describe installation requirements for airport runway lighting systems
2. Test, inspect, and maintain airport lighting systems

CONTENT

- CEC and other code requirements
- Controls
- Wiring methods
- Lighting system components
- Conductors and cables
- Engineered specifications
- See competency O2

Line (GAC):	R	INSTALL AND MAINTAIN BRANCH CIRCUITRY
Competency:	R7	Install and maintain traffic signal lights and controls

Objectives

To be competent in this area, the individual must be able to:

- Describe installation requirements for traffic signal lights and controls.
- Determine the requirements for the installation of traffic signal lights and controls according to the CEC.

LEARNING TASKS

1. Describe installation requirements for traffic signal lights and controls

CONTENT

- Control systems
- Control components
- Wiring methods
- Traffic signal system components

Line (GAC):	X	INSTALL AND MAINTAIN NON-ROTATING EQUIPMENT AND ASSOCIATED CONTROLS
Competency:	X1	Install non-rotating equipment and associated controls

Objectives

To be competent in this area, the individual must be able to:

- Describe the installation of welding equipment.
- Describe the installation of heating systems (non-HVAC).
- Determine the requirements for installing non-rotating equipment and associated controls according to the CEC.

LEARNING TASKS

1. Describe the installation of welding equipment
2. Describe the installation of heating systems (non-HVAC)

CONTENT

- Welding equipment
 - Conductor size
 - Overcurrent protection
 - Welder bank calculation
- Operating principles
- Types
 - Surface
 - Induction
 - Bare element
- Controls
- Installation

Line (GAC):	Z	INSTALL AND MAINTAIN SIGNALING SYSTEMS
Competency:	Z1	Install fire alarm systems

Objectives

To be competent in this area, the individual must be able to:

- Describe the operation of fire alarm and suppression systems.
- Describe procedures to install fire alarm and suppression systems.
- Describe procedures to test fire alarm and suppression systems.
- Connect an initiating and signaling circuit.
- Determine the requirements for the installation of fire alarm systems according to the CEC.

LEARNING TASKS

1. Describe the features of fire alarm systems
2. Determine installation requirements for fire alarm systems
3. Describe procedures to test fire alarm and suppression systems.

CONTENT

- Types of fire alarm systems
 - Addressable
 - Non-addressable
- Fire alarm system operation
- Common initiation and signal devices
- Control panel functions
- Suppression systems
- Pre-action systems
- Ancillary system tie-in
- Supervision
- Paging systems
- Monitoring
- Annunciator
- Fire pumps
- Selection of components
- Circuit connections
- Device placement
- Routing
- Installation and wiring requirements
- Standards, specifications and codes
- Inspection
- Verification
- Testing and troubleshooting
- Standards, specifications and codes

Achievement Criteria

Performance	The learner will:
<p>1. Explain the importance of the environment and the role of the individual in protecting it.</p> <p>2. Identify the major environmental issues and the causes of them.</p> <p>3. Describe the impact of environmental issues on human health and the economy.</p> <p>4. Analyze the environmental impact of different activities and products.</p> <p>5. Evaluate the effectiveness of different environmental policies and programs.</p> <p>6. Propose solutions to environmental problems.</p> <p>7. Communicate environmental information to others.</p> <p>8. Participate in environmental activities and programs.</p>	<p>1. Understand the importance of the environment and the role of the individual in protecting it.</p> <p>2. Identify the major environmental issues and the causes of them.</p> <p>3. Describe the impact of environmental issues on human health and the economy.</p> <p>4. Analyze the environmental impact of different activities and products.</p> <p>5. Evaluate the effectiveness of different environmental policies and programs.</p> <p>6. Propose solutions to environmental problems.</p> <p>7. Communicate environmental information to others.</p> <p>8. Participate in environmental activities and programs.</p>

- Connect an initiating circuit
- Connect a signaling circuit

Conditions	In a lab setting as part of a practical project
------------	---

Criteria	The learner will be evaluated on:
----------	-----------------------------------

- Safety
- Correct connection of initiating circuit and signaling circuit

Line (GAC):	Z	INSTALL AND MAINTAIN SIGNALING SYSTEMS
Competency:	Z3	Install security and surveillance systems

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of security alarm systems.
- Describe procedures to install security alarm systems.
- Determine the requirements for the installation of security and surveillance systems according to the CEC.

LEARNING TASKS

1. Describe the operating principles of security alarm systems
2. Describe the components of security alarm systems
3. Describe procedures to install security alarm systems

CONTENT

- Regulatory authorities
- Types of security systems
 - Silent/Audible
 - Addressable
- Security alarm system operation
- Common detection and alarm devices
- Control panel functions
- Monitoring and recording
- Layout
- Surveillance
- Panels
- Programming devices
- Initiation and signal
- Surveillance

- Access control
- Mounting
- Cable routing
- Interfacing
- Verification
- Troubleshooting

Line (GAC): **AA INSTALL AND MAINTAIN COMMUNICATION SYSTEMS**
Competency: **AA1 Install voice/data/video (VDV) systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe the installation of fibre optic cable.
- Describe methods of certification for a structured cable system.
- Determine the requirements for the installation of fibre optic cable according to the CEC.

LEARNING TASKS

CONTENT

- | | |
|--|--|
| 1. Describe the basic features of fibre optic installations | <ul style="list-style-type: none"> • Composition of fibre optic cables • Features of fibre optic cables <ul style="list-style-type: none"> ○ Single-mode ○ Multi-mode |
| 2. Describe the installation of fibre optic cable | <ul style="list-style-type: none"> • Installation procedures • Wiring requirements |
| 3. Describe procedures and documentation for testing | <ul style="list-style-type: none"> • Testing of cables and terminations • Troubleshoot failures • Test data reports |
| 4. Describe procedures to install a structured cable system | <ul style="list-style-type: none"> • Design of the system • Manufacturer's installer certification • Certification and warranty procedures |

Line (GAC): **AA INSTALL AND MAINTAIN COMMUNICATION SYSTEMS**
Competency: **AA3 Install nurse call systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of nurse call systems.
- Describe procedures to install nurse call systems.
- Determine the requirements for the installation of nurse call systems according to the CEC.

LEARNING TASKS

1. Describe the operating principles of nurse call systems
2. Describe procedures to install nurse call systems

CONTENT

- Types
- Components
- Applications
- Installation procedures
- Standards, specifications, and codes
- Mounting system components
- Connecting systems components
- Verification of system

Line (GAC): AB **INSTALL AND MAINTAIN BUILDING AUTOMATION SYSTEMS**
Competency: AB1 **Install building automation systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of building automation systems.
- Describe procedures to install building automation systems.

LEARNING TASKS

1. Describe the operating principles of building automation systems
2. Describe procedures to install building automation systems

CONTENT

- Lighting
- Fire systems
- Security systems
- HVAC
- Irrigation
- Sound
- Load shedding
- Window coverings
- DCS
- Computer interface
- Communication protocols
- Standards and manufacturers' specifications
- Maintenance
- Testing and verification

Line (GAC): **AC INSTALL, PROGRAM AND MAINTAIN AUTOMATED CONTROL SYSTEMS**

Competency: **AC1 Install automated control systems**

Objectives

To be competent in this area, the individual must be able to:

- Describe the operating principles of programmable logic controllers (PLCs).
- Describe the installation procedures of PLCs.
- Connect PLCs.
- Describe the operating principles of automated control systems.
- Connect automated control systems.

LEARNING TASKS

1. Describe the features of programmable logic controllers (PLCs)

2. Describe the memory system of the processor

3. Describe input and output (I/O) types

4. Describe basic installation procedures

5. Describe the operating cycle of the PLC processor

CONTENT

- Input section
- Central processing unit
- Output section
- Programming devices
- Common peripherals
- Advantages of PLCs

- Executive memory
- User memory
- Input/Output (I/O) addressing
- Other addressing

- Discrete AC output types
- Discrete DC output types
- Discrete AC input types
- Discrete DC input types
- Burdening resistor
- Preferred voltage levels
- Analog input types
- Analog output types

- CEC
- Environmental considerations
- Wiring, grounding and shielding
- Power connections and sources

- Program scan
- I/O update
- Scan time consideration

LEARNING TASKS

6. Connect PLC systems

7. Describe the components of an automated control system

8. Describe common types of sensors and transducers

9. Describe the action of the controller in automated control systems

10. Describe common types of electrical actuators

11. Connect automated control systems

CONTENT

- Use I/O indicator lights to check wiring
- Use I/O image tables for bit status
- Monitor/test program on-line
- Perform safety checks
- Update documentation
- Print out working program
- Open loop control systems
- Closed loop control systems
- Process variables
- Control system elements
- Motion sensors
- Force sensors
- Fluid sensors
- Temperature sensors
- Light sensors
- Hall effect sensors
- Level sensors
- Basic comparator circuits
- Application of feedback signals
- Modes of control
- Solenoids, clutches and brakes
- DC servo motors
- AC servo motors
- Encoders and resolvers
- Stepper motor controls
- Troubleshooting sensors
- Adjust set-points
- Program

Line (GAC): AC INSTALL, PROGRAM AND MAINTAIN AUTOMATED CONTROL SYSTEMS

Competency: AC3 Program automated control systems

Objectives

To be competent in this area, the individual must be able to:

- Write basic PLC programs.
- Use a programming terminal to upload and download PLC programs.

LEARNING TASKS

CONTENT

- | | |
|--|--|
| 1. Describe basic programming instructions | <ul style="list-style-type: none"> • Types of programming languages • Relay ladder logic instructions • Output energize instruction • Examine if on instruction (XIC) • Examine if off instruction (XIO) • Latching and unlatching instructions • Internal relay instructions • Timer and counter instructions |
| 2. Describe the interaction of hardware and software | <ul style="list-style-type: none"> • Effects of input status on input image tables • Program logic scanning sequence • True-false instruction status • Control of program over output image tables • Effects of output image tables on output devices • Fail-safe wiring practices |
| 3. Write basic PLC programs | <ul style="list-style-type: none"> • Single motor control • Multi-motor sequences • Reversing motor control • Three-way switch controls • Toggle operation • Pumping systems • Up and down counters • Latching circuits |
| 4. Use a programming terminal | <ul style="list-style-type: none"> • Application software and PLC logic • Saving PLC documentation • Downloading/uploading programs • On-line monitoring • Editing/modifying programs |
| 5. Describe PLC operating modes | <ul style="list-style-type: none"> • Run mode • Program mode • Test mode • Single scan mode • PLC status indicators |

Level 4 Grading Sheets: Subject Competency and Weightings

In-school Percentage Score Combined theory and practical subject competency multiplied by	70%
Proprietary Level 4 Exam Percentage Score The exam score is multiplied by	30%
Final in-school percentage score Apprentices must achieve a minimum 70% as the final in-school percentage score to be eligible to write the Interprovincial Red Seal exam.	FINAL%

All apprentices who complete Level 4 of the Construction Electrician program with a **FINAL** level percentage score of 70% or greater will write the Interprovincial Red Seal examination as their final assessment.

SkilledTradesBC will enter the apprentices' Construction Electrician Red Seal Interprovincial examination mark in SkilledTradesBC Portal.

A minimum mark of 70% on the examination is required for a pass.

Section 5

TRAINING PROVIDER STANDARDS

Facility Requirements

Classroom Area

- 1,000 sq. ft. for a class size of 16 students
- Comfortable seating (moveable tables and chairs) suitable for training, teaching, lecturing and drafting
- Instructional media to include multimedia projector, projection screen, DVD player, and whiteboard (optional: flip chart)
- In-room temperature regulation and ventilation
- Lighting controls (for lights and shades or blinds)
- Compliance with all local and national fire code and occupational safety requirements

Shop Area

- Minimum 3,000 square feet of shop area including a tool crib and workstations
- Well heated and ventilated
- 10 ft. high ceilings
- Lighting appropriate to detailed work

Lab Requirements

- Fully operational, representative equipment
(refer to *Shop and Laboratory Equipment* for requirements by level – next page)

Student Facilities

- Adequate lunchroom as per WorkSafeBC requirements
- Adequate washroom facilities as per WorkSafeBC requirements
- Personal storage lockers

Instructor's Office Space

- 150 sq. ft. per instructor, with a desk, chairs and materials storage / filing system

Storage

- 100 sq. ft. per student for storage of materials (may be outdoors)
- 25 sq. ft. per student for tools storage
- 15 sq. ft. per student for individual project and materials storage

Tools and Equipment

Shop Equipment

Required

Equipment List is based on the standard class size of 16 apprentices. The facilities must be suitable for instructional use.

*- As Required

Level 1

- 8 Power supply stations (with fixed and variable AC and DC outputs and metering)
- 8 Sets of resistors for circuit analysis labs
- * Misc. magnetic devices such as relays, solenoids, bells, buzzers, chimes, etc.
- 8 Analogue multi-meters
- 8 Digital multi-meters
- 8 Digital scopes, dual-trace, (Analog optional for demo purposes)
- 8 Wattmeters
- 8 Clamp-on ammeters
- 1 Solenoid-plunger (wiggy) testers
- 1 Megger
- 1 Wheatstone bridge
- 1 Outlet analyzer
- 1 Watt-hour meter
- 4 Wire gauges, micrometers
- * Misc. conductors, cables, raceways, boxes, fittings and receptacles for demo purposes
- * Misc. low voltage single-phase distribution equipment for demo purposes
- * Misc. dimmer, snap switches, etc. for lighting control
- * Misc. Incandescent and LED lights for demo purposes
- * Variety of circuit protective devices
- 8 Electronic Stations (trainers)
- 16 Computer workstations with associated software programs and 1 printer
- 16 Locks, Tags and Scissors
- 8 Bix tools or 110 tools
- 4 Wire map tools
- 8 Residential blueprints

Level 2

- 8 Power supply stations (with fixed and variable AC and DC outputs and metering)
- 8 Sets of resistors, capacitors and inductors for circuit analysis labs
- * Misc. magnetic devices such as relays, solenoids, bells, buzzers, chimes, etc.
- 8 Motor Control Stations (with manual and magnetic starters, reversing starters, assorted switches, TD relays and pilot devices as necessary)
- 4 Reversing drum switches
- 8 Small 3-phase motors
- 4 Single-phase, split-phase, dual-voltage motors
- 8 Digital scopes, dual-trace, (Analog optional for demo purposes)
- 8 Scope meters
- 8 Digital multi-meters
- 8 Wattmeters
- 8 Clamp-on ammeters
- 4 Light (photo) meters
- 8 Isolation Transformers, dual-winding type (.3 kVA typical)
- 4 Autotransformers, multi-tap type (.25 kVA typical)
- 4 Current metering transformers
- 4 Potential metering transformers

- * Misc. conductors, cables and raceways for demo purposes
- * Misc. light fixtures, Fluorescent lights (rapid start) (instant start), Mercury vapour, Metal halide lights, H.P. Sodium lights, L.P. Sodium lights, Exit Lights, Unit Lighting for demo purposes.
- * Variety of circuit protective devices
- 1 Single-phase Power factor correction unit (capacitor) for demo purposes
- 1 Gas fired furnace trainer
- 1 Electric furnace trainer
- 1 HVAC roof top trainer
- 1 Geothermal trainer
- 1 Heat pump trainer
- 8 Electronic stations (trainers)
- 8 Function (signal) generators
- 16 Computer workstations with associated software programs and 1 printer
- 8 Commercial blueprints

Level 3

- 8 Power supply stations, 3 phase (with fixed and variable AC and DC outputs and metering)
- 8 Sets of resistors, capacitors and inductors for 3-phase circuit analysis labs
- 8 Three-phase isolation transformers or 24 single-phase transformers to create a 3 phase bank
- 8 Motor Control Stations (with manual and magnetic starters, reversing starters, control and time-delay relays, electronic relays, assorted switches, plugging and anti-plugging devices, programmable relays and pilot devices, as necessary)
- 8 DC Machines for DC motor and DC Generator labs
- 8 Small 3-phase motors
- * Various three-phase reduced-voltage starters, electronic soft start controller for demo purposes (controls, assorted pilot devices, etc. as necessary)
- 8 Adjustable speed DC drive c/w motors
- 8 Variable frequency AC (VFD) drive c/w motors
- 4 Reversing drum switches
- 8 Three-phase squirrel-cage motors (assorted 6-lead, 9-lead and 12-lead)
- 4 Three-phase wound-rotor motors and controllers
- 4 Three-phase synchronous motors and controllers
- 8 Single-phase, capacitor-start, dual-voltage motors
- 1 Single-phase, shaded-pole motor
- 1 Single-phase, universal motor
- 2 Three-phase alternator synchronizing panel with metering and controls
- 2 Three-phase alternators with prime movers
- 8 Digital scopes, dual-trace, (Analog optional for demo purposes)
- 4 Power quality analyzers
- 8 Digital multi-meters
- 8 Wattmeters
- 8 Clamp-on ammeters
- 1 Phase-sequence indicator
- 1 Megger
- 4 Hand-held tachometers
- 1 Motor rotation indicator
- 1 Three-phase Power factor correction unit for demo purposes
- * Misc. conductors, raceways and various hazardous location fittings for demo purposes
- 8 Three-phase rectifier boards
- 8 Electronic trainers for discrete components
- 8 Function (signal) generators
- 16 Computer workstations with associated software programs and 1 printer
- 8 Institutional blueprint sets

Level 4 Construction Electrician

- 8 Power supply stations 3 phase (with fixed and variable AC and DC outputs and metering)
- 8 Sets of resistors, capacitors and inductors for 3-phase circuit analysis labs
- 8 Three-phase isolation transformers or 24 single-phase transformers to create a 3 phase bank
- 8 Three-phase motor control stations (with assorted reduced-voltage/current magnetic starters, reversing starters, electronic starters, control and time-delay relays, assorted pilot devices as necessary)
- 8 Three-phase squirrel-cage motors (assorted 6-lead, 9-lead and 12-lead)
- 4 Three-phase wound-rotor motors and controllers
- 4 Three-phase synchronous motors and controllers
- 1 Three-phase Power factor correction unit for demo purposes
- 8 Digital scopes, dual-trace, (Analog optional for demo purposes)
- 8 Digital multi-meters
- 8 Wattmeters
- 8 Clamp-on ammeters
- 4 Hand-held tachometers
- 8 Electronic (semiconductor devices) trainers
- 8 Digital Logic trainers
- 8 Function (signal) generators
- 16 Computer workstations with associated software programs and 1 printer
- 8 PLC workstations, with associated software
- 8 PLC simulator display boards
- 1 Transducer fundamentals trainer for demo of automated controls
- 4 Conventional non-addressable fire alarm systems c/w initiating, signal and alarm devices
- 4 Addressable fire alarm systems c/w initiating, signal and alarm devices
- 1 Standby power system transfer switch for demo purposes
- 1 Data cabling installation and test equipment demo
- 1 Fibre optic tool kit for data cabling demo
- 1 Nurse call system trainer for demo purposes
- 1 Security system trainer for demo purposes
- 1 UPS System for demo purposes
- 1 Photovoltaic trainer for demo purposes
- 1 Voice/Data/Video (VDV) system trainer for demo purposes
- 8 Industrial blueprints
- * Various High voltage demo's protective relaying and metering
- * Various High voltage test equipment demo's including approved gloves, hot stick, voltage tester, mats, and personal protective equipment for demo purposes
- *- Various HV cable stress cone termination kits for demo purposes

Student Tools (supplied by student)

Required

Contact Training Facility for recommended tools and equipment that students need to supply.

NOTE:

This list of Reference Materials is for training providers. Apprentices should contact their preferred training provider for a list of recommended or required texts for this program.

Instructor Requirements

Occupation Qualification

The instructor must possess:

- For Levels 1, 2 & 3:
 - A Construction Electrician or Industrial Electrician BC Certificate of Qualification preferably with Red Seal Endorsement
 - A Construction Electrician or Industrial Electrician Certificate of Qualification from another Canadian jurisdiction with Red Seal Endorsement only
- For Level 4:
 - A Construction Electrician BC Certificate of Qualification preferably with Red Seal Endorsement
 - A Construction Electrician Certificate of Qualification from another Canadian jurisdiction with Red Seal Endorsement only

Work Experience

A minimum of 5 years' experience working in the industry as a journeyperson.

Instructional Experience and Education

It is preferred that the instructor also possesses one of the following:

- An Instructor's Diploma or equivalent
- A Bachelor's Degree in Education
- A Master's Degree in Education

Appendices

Appendix A

Previous Contributors

Acknowledgements (2013)

The Program Outline was prepared with the advice and direction of an industry steering committee convened initially by the BC Construction Industry Training Organization (CITO). Members include:

Industry Subject Matter Experts retained to assist in the development of Program Outline content (2013):

Industry Representatives

Mario Baptista, Canem West Services
Brent Baptiste, Western Pacific Enterprises
Mike Baxter, Mott Electric Ltd.
Stuart Blundell, Canfor
Nick Bourassa, Lakewood Electric
Dan Campbell, Keldon Electric and Data Ltd.
Bill Card, Ross Morrison Electric
Larry Carriere, Keldon Electric and Data Ltd.
Dallas Crompton, Status Electrical Corp.
Dave Fettback, Western Pacific Enterprises
Jim Reaugh, Bridge Electric Corp.
Al Stewart, Duke Energy Gas Transmission West
Graham Trafford, Mott Electric Ltd.

Instructor Articulation Representatives

Jim Gamble – Okanagan College
Ken Holland – Camosun College
Alain Lavoie – College of New Caledonia
Peter Poeschek – Thompson Rivers University
Ted Simmons – British Columbia Institute of Technology
John Todrick – University of the Fraser Valley

SkilledTradesBC would like to acknowledge the dedication and hard work of all the industry representatives appointed to identify the training requirements of the Construction Electrician occupation.
